satelettronica

Technical information should always be available to the foremen and mechanics, because their careful and constant adherence to the instructions is essential to ensure vehicle road-worthiness and safety. In addition, the normal basic safety precautions for working on motor vehicles must, as a matter of course, be observed.

Gear ratios

I - 1st gear
II - 2nd gear
III - 3rd gear
IV - 4th gear
V - 5th gear
R - Reverse gear
A - Final drive
T - Speedometer drive

Arrows point in direction of travel

3 - Calculating overall ratio (i)

3.1 - Calculating overall ratio (i)

Example:

	5th gear	Final drive
Drive gear	ZG1 = 33	ZA1 = 19
Driven gear	ZG2 = 43	ZA2 = 60

i= Z2/ Z1 1)

iG = Gear ratio = ZG2/ZG1 = 33 /43 = 0.717

iA = Axle ratio = ZA2 / ZA1 = 60 / 19 = 3.158

Overall ratio = total ratio
= iG x iA = 0.717 x 3.158 = 2.264

1) Z1 = No. of teeth drive gear, Z2 = No. of teeth driven gear

4 - General repair instructions

4.1 - General repair instructions

To ensure perfect and successful gearbox repairs, the greatest care and cleanliness as well as the use of good and proper tools is essential. Obviously, the basis rules for safety are also applicable during repair work.

A number of generally valid instructions applicable for the various repair procedures - which were previously repeated a number of times at numerous places in the Workshop Manual - are summarized here. They apply to this Workshop Manual.

Gearbox

- When installing ensure that the dowel sleeves between the engine and gearbox are correctly located.
- When changing a gearbox fill with gear oil to the lower edge of the filler hole.
- Capacities and specifications => Page 2 .

Notes:

- If the oil level is topped up with the gearbox installed, carry out oil level check as follows:
- Fill with oil to the lower edge of the filler hole and refit filler plug. Start engine, engage a gear and allow gearbox to turn for approx. 2 minutes. Switch off engine and again top-up oil to lower edge of filler hole.

Gaskets, sealing rings

- Thoroughly clean joint surfaces and apply sealant AMV 188 200 03.
- Apply sealant uniformly but not too thick.
- Renew "O-rings".
- Radial shaft oil seals.

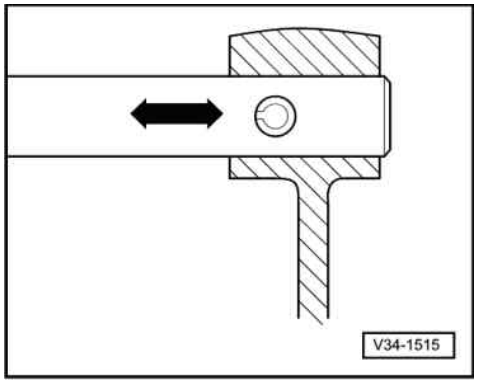
Before installing:

Lightly oil outer edge, fill space between sealing lips with grease.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.
Copyright by Volkswagen AG.
satelettronica

After installation:

Check gearbox oil; if necessary top-up to lower edge of oil filler hole, specification => Page 2 .



Locking devices

- Renew circlips.
- Do not overstretch circlips.
- Circlips must locate properly in the groove.
- -> Renew spring pins
  Installation position: Slot longitudinal to line of force.

Bolts and nuts

- Tighten and loosen bolts and nuts for securing covers and housings in a diagonal sequence.
- Especially delicate parts, such as clutch pressure plates, must not be distorted. Loosen and tighten bolts and nuts in stages in a diagonal sequence.
- Tightening torques as specified are for unoiled bolts and nuts.
- Renew self-locking bolts and nuts.

Bearings

- Install needle bearings with lettered side (thicker metal) towards fitting tool.
- Taper roller bearings fitted to one shaft must be renewed as a set. Use same make of bearings if possible!
- Heat inner races to approx. 100 °C before installing.
- Do not interchange outer and inner races of bearings of the same size, bearings are paired.

Shims

- Measure shims at several points with a micrometer. Tolerance variations make it possible to find the exact shim thickness required.
- Check for burrs and damage.
- Only install perfect shims.

Synchronizer rings

- Do not interchange. When reusing always fit to the same gear.
- Check for wear and renew if necessary.
- Coat with gear oil before installing.

Gear wheels

- Before installing clean and heat on a hot plate to approx. 100 °C.
- Temperature can be checked with temperature tester V.A.G 1558.

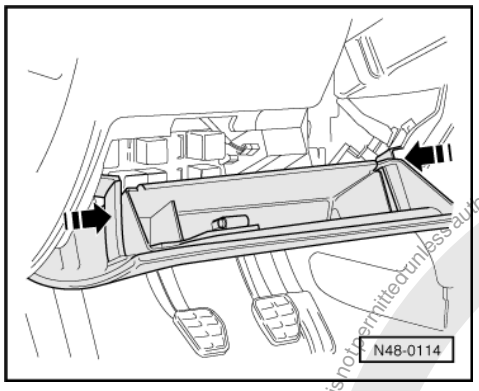
1.3 - Removing and installing over-centre spring

Special tools, testers and auxiliary items



- Installation clamp 3317

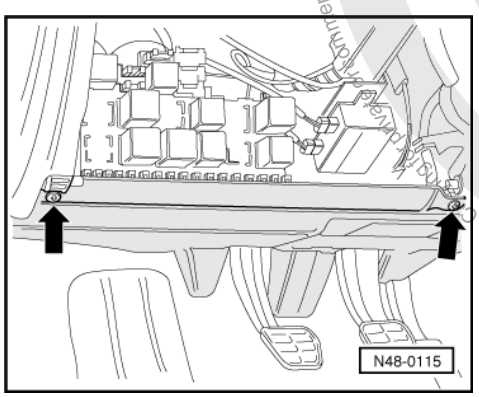
Removing

- Disconnect earth strap from battery

Note:

Note radio coding for vehicles with coded radio.

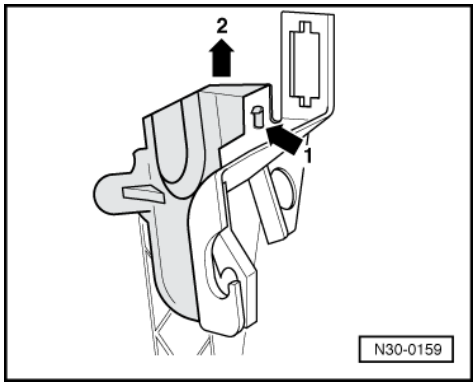
- -> Pull stowage compartment, below dash panel, out of mountings but first push stops in direction of arrow.



- -> Unbolt cover (arrows)
- Unhook relay plate from mountings;

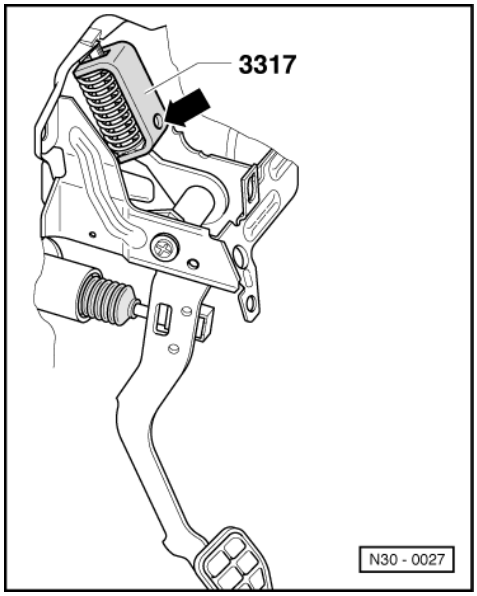
Note:

Do not pull connectors off relays and wiring.



Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Commercial use or distribution for commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

- Unhook electric wiring from mountings
- -> Remove cover for clutch pedal from mounting bracket (arrows -1- and -2-).

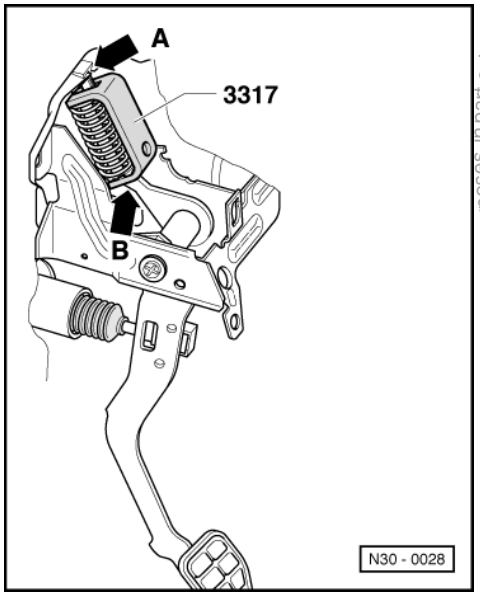


- -> Depress clutch pedal slightly (over-centre spring tensioned to maximum) and press on installation clamp 3317 from top right.

Note:

The drilling faces towards clutch pedal.

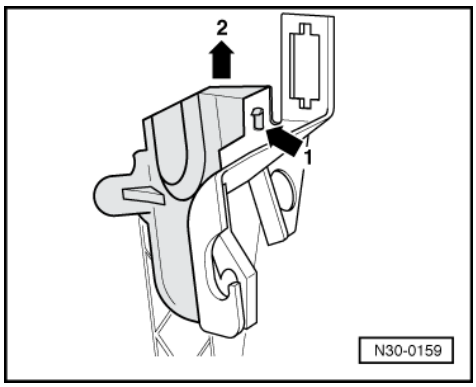
- Depress clutch pedal and take out over-centre spring together with retaining clamp 3317 downwards to left.



Installing

- Operate clutch pedal.
- -> First insert over-centre spring into rear mounting (arrow A), then press front upwards until the retaining clamp seats on the mounting lug of the clutch pedal (arrow B).
- Take out retaining clamp whilst bringing clutch pedal to rest position.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



- -> Locate cover on mounting bracket (arrows -1- and -2-).
- Insert relay plate into mounting; check wiring and relay connectors and press fully home if necessary.
- Install cover and stowage compartment below dash panel.

1.4 - Removing and installing clutch pedal

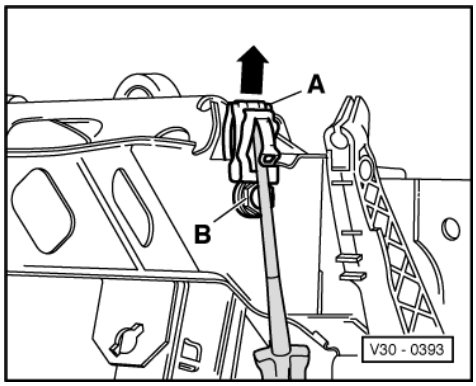
Removing

- Disconnect earth strap from battery

Note:

Note radio coding for vehicles with coded radio.

- Remove stowage compartment and cover; unhook relay plate from mountings => from Page 11 .
- Separate clutch pedal from master cylinder => Page 17 and push operating rod towards engine compartment onto stop.
- Removing over-centre spring => Page 11 .



- Remove clutch pedal securing clip from pivot pin, by levering tab up with a screwdriver and pushing clip off.
- -> Take brake pedal side pivot pin securing clip off towards switch panel (direction of arrow) by locating a screwdriver under the retaining clip -A-.
- Pull clutch and brake pedal pivot pin out to the right, until the clutch pedal can be removed.

Installing

Installation is carried out in the reverse sequence, when doing this note the following:

- Align clutch pedal/brake pedal pivot pin so that the flats -B- are vertical before fitting the brake pedal side securing clip => Illustration V30-0393.
- Fit clutch pedal onto pivot pin.
- Fit securing clips onto brake pedal end of pivot pin and onto clutch pedal end.
- Removing over-centre spring => Page 11 .
- Engage clutch pedal with master cylinder operating rod.
- Fill brake fluid reservoir up to "max" marking with brake fluid.

Protected by copyright. Copying for private or commercial purposes, in part or whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

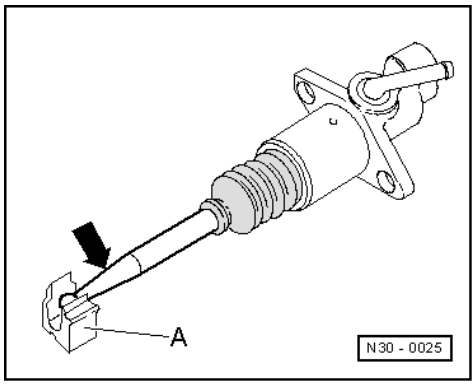
-> Fig.1 Lever retainer -A- off in direction of arrow



-> Fig.2 Press master cylinder operating rod in retainer -A- in direction of arrow

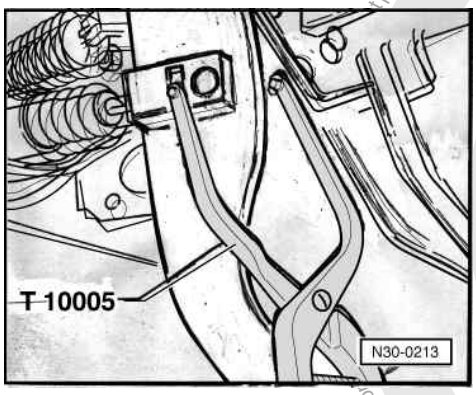
1.6 - Removing and installing master cylinder

Removing

- Remove coolant expansion tank and lay to one side.

Note:
Do not open cooling system.

- Pull supply hose off brake fluid reservoir and seal.

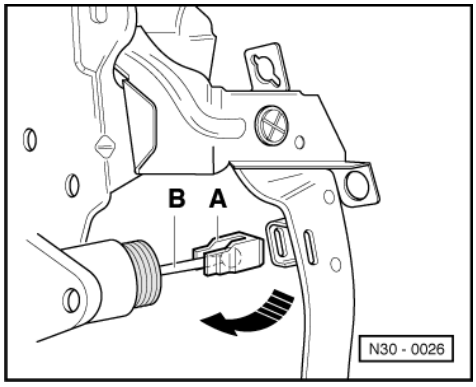


- Remove pipe from master cylinder and seal.

-> Separate master cylinder operating rod from clutch pedal.

- Unbolt master cylinder from passenger compartment.

Installing

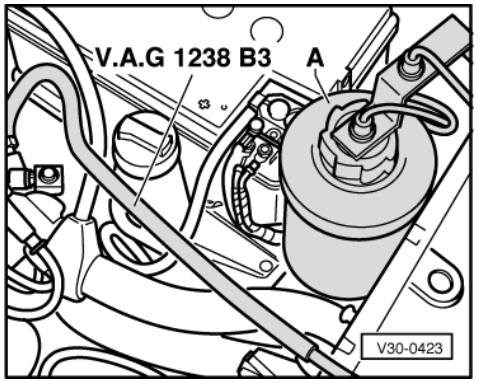


Protected by copyright. Copying or publication is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

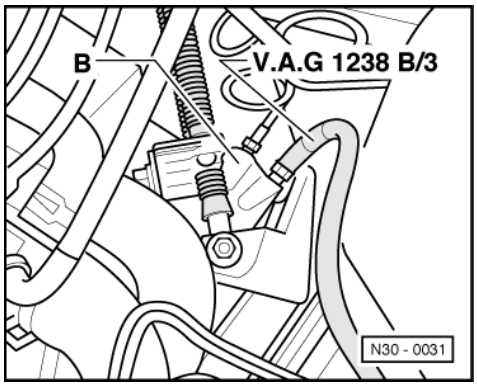
Installation is carried out in the reverse sequence, when doing this note the following:

- -> The retainer -A- must be fitted to the master cylinder operating rod -B-.
- To engage press clutch pedal towards bulkhead (direction of arrow). Ensure correctly located.
- Bleeding clutch system after installing master cylinder=>Page 18 .

1.7 - Bleeding clutch system



- Bleed clutch system using the brake filling and bleeding appliance V.A.G.1238 B.
- To bleed system use bleed hose V.A.G 1238/B - 670 mm long.
- -> Connect bleed hose to brake bleeding appliance collector bottle -A-pressure hose.



- -> Connect bleed hose to slave cylinder -B- and open bleed valve.
- Depress clutch pedal several times after completion of bleeding process.

satelettronica

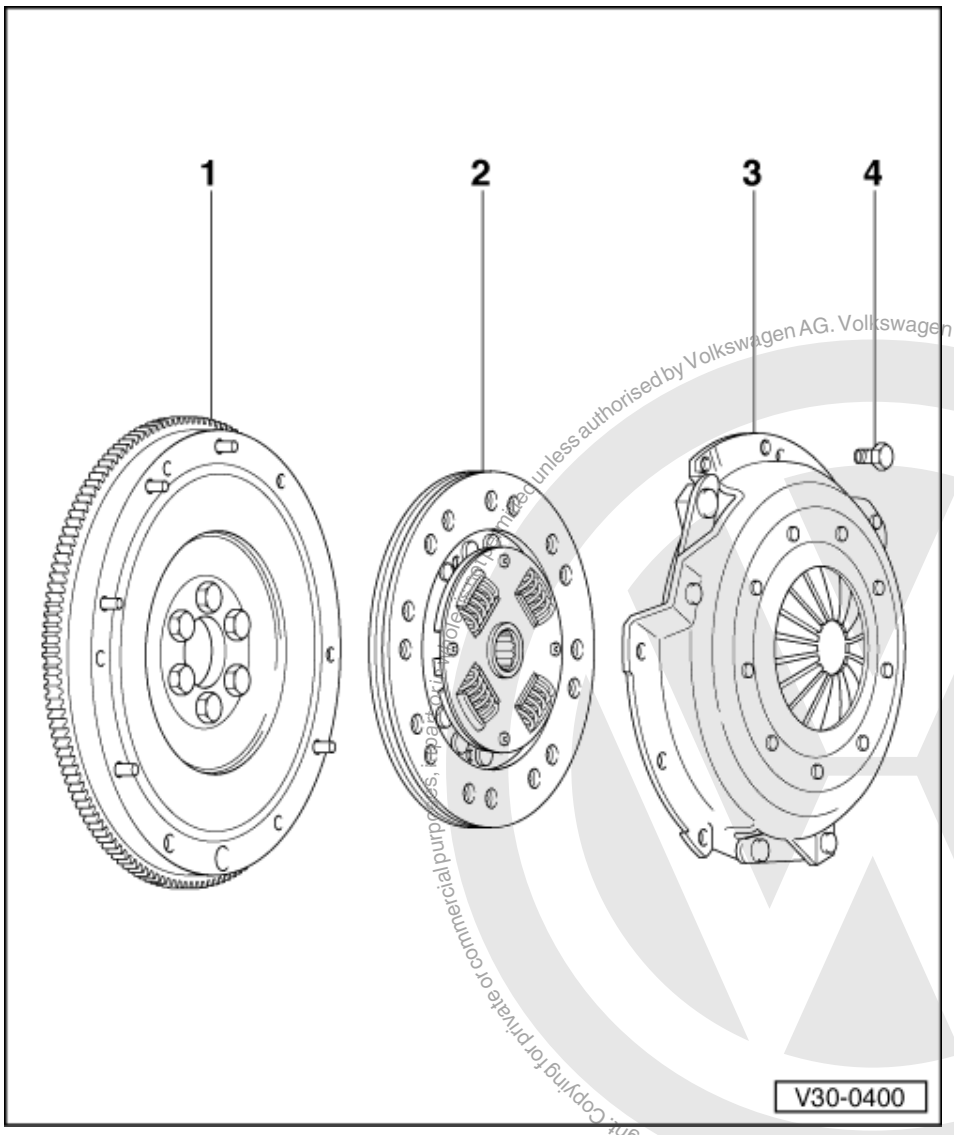
(Gearbox removed)

Notes:

- Before replacing the clutch and pressure plate note fault finding transmission No.9 - Defects on the clutch and clutch mechanism
- Replace clutch plates and pressure plates with damaged or loose rivets
- Select correct clutch plate and pressure plate according to parts list and engine code.

1 Flywheel
- Ensure centring pins are a tight fit
- Contact surface for clutch lining must be free of grooves, oil and grease
- Removing and installing

=> Repair group13



2 Clutch plate

- Diameter
  =>Page 2
- Note installation position, spring cage faces to pressure plate
- Centring => Fig. 1
- Lightly grease splines

Note:

Clean input shaft splines and on used clutch plates, the hub splines, remove corrosion and apply only a very thin coating of grease Part No: G 000 100 to the input shaft splines. Then move clutch plate to and fro on input shaft until hub moves freely on shaft. Excess grease must be removed.

Protected by copyright. Copying for private or commercial purposes, partially or completely, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

3 Pressure plate

- Removing and installing => Fig. 1
- Check ends of diaphragm spring
  => Fig. 2

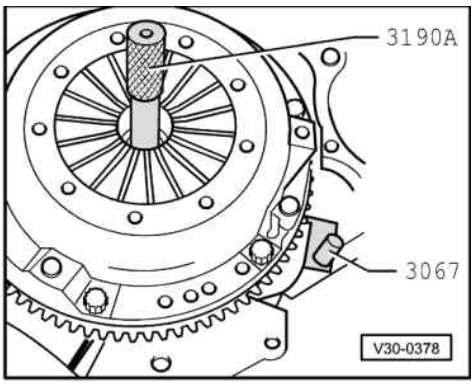
Note:

Pressure plates are protected against corrosion and greased. Only the contact surface may be cleaned, otherwise the service life of the clutch will be considerably reduced.

4 Twelve point bolt, 20 Nm

- Loosen and tighten gradually and diagonally

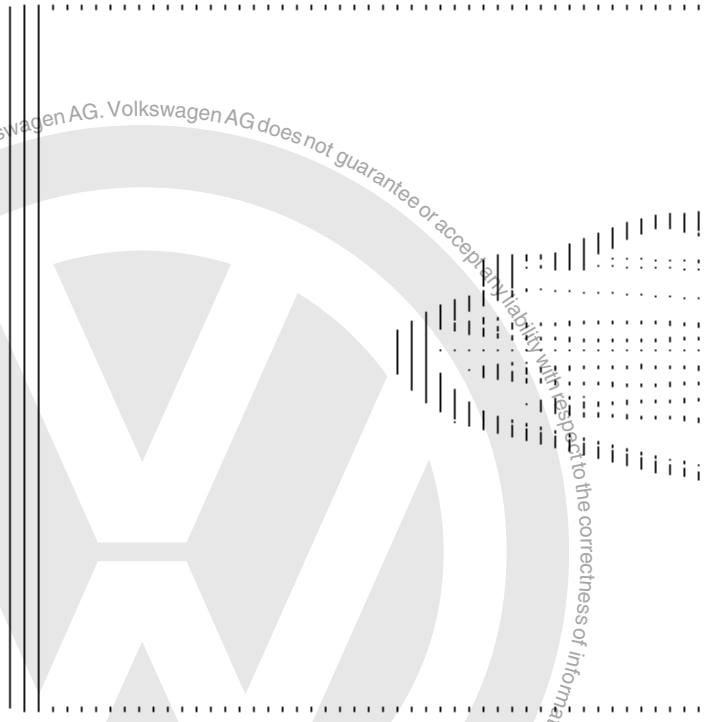
satelettronica



-> Fig.1 Centring clutch plate and removing and installing pressure plate

- Loosen and tighten bolts gradually and diagonally.
- Reverse position of retainer 3067 when removing.

Warning!
The clutch plate lining must make full contact with the flywheel and the pressure plate contact surface must make full contact with the clutch plate lining (pressure plate housing square to flywheel) before inserting securing bolts. If the pressure plate housing is pulled in at an angle, the centralizing holes in the pressure plate housing and the centralizing pins in the flywheel will be damaged.



-> Fig.2 Checking ends of the diaphragm spring

- Wear up to half the thickness of the diaphragm spring is permitted.

satelettronica

-> Fig.3 Removing lock plate for gate selector bracket and gear stick guide/gate selector housing

- Lift tab in direction of arrow.

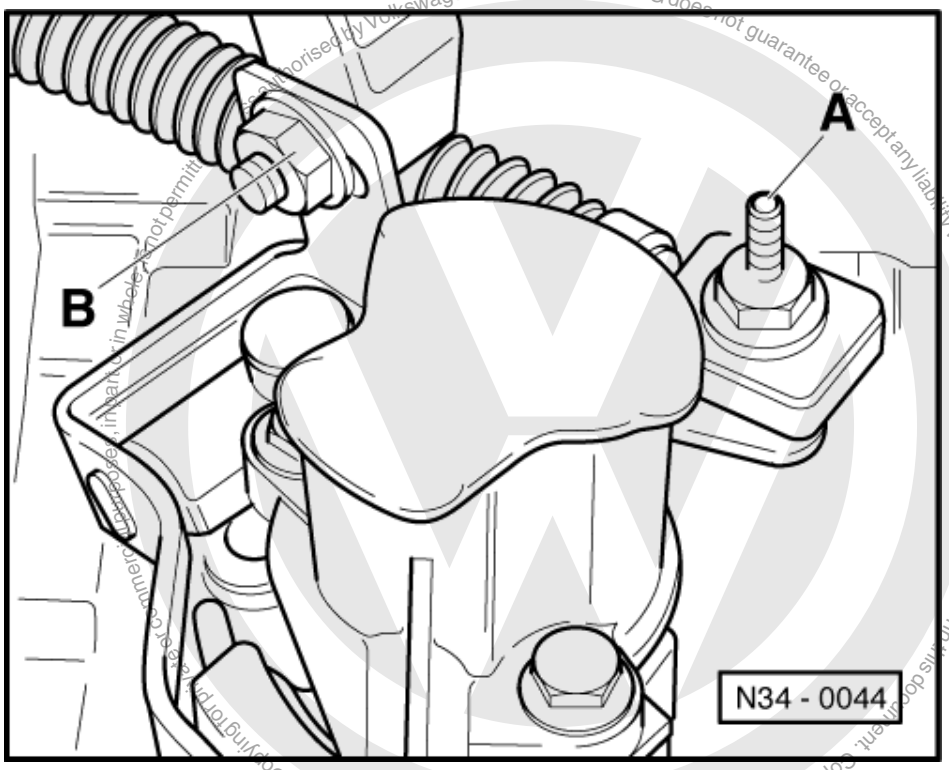
1.7 - Adjusting gear selector mechanism

Special tools, testers and auxiliary items

- Gear lever gauge 3192
- Wedge 3192/1

Gearbox in neutral.

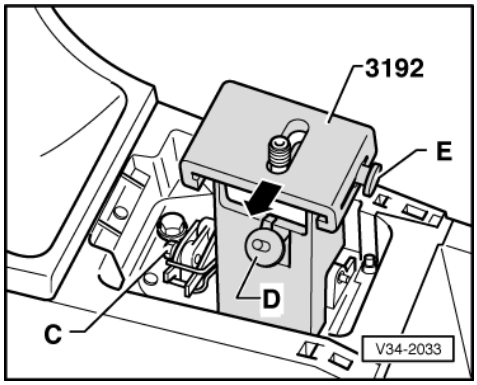
- Remove gear stick knob and gaiter => Page 35



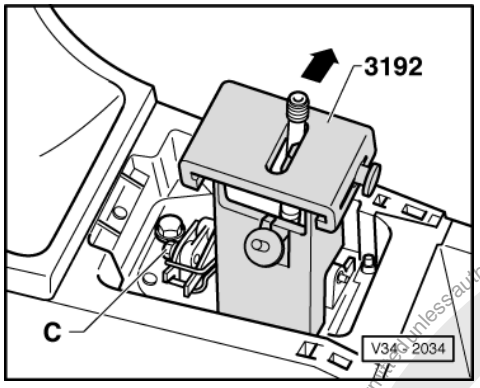
- Remove balance weight => Page 33 .

satelettronica

- -> Loosen bolt -A- and nut -B-, until the gear selector cable and actuating arm/gate selector cable are free to move in the elongated holes.

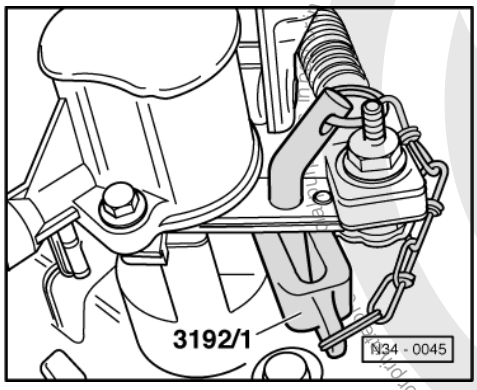


- -> Loosen bolt -C-, pull off foam seal in area of bolt -C- if necessary.
- Insert gear stick jig.
- Swing jig securing hook under mounting plate and tighten nut -D-.
- Press gear stick into left-hand detent of sliding piece.
- Press gear stick together with sliding piece to left onto stop (direction of arrow) and tighten sliding piece with bolt -E-.



- -> Press gear stick into the right-hand detent (direction of arrow).
- Tighten bolt -C-.

- Insert wedge and pin.



- -> Slide wedge between gear selector lever and selector cover plate, ensuring no play.

Note:

Wedge must not lift gear stick.

- In this position secure gear selector cable and actuating arm/gate selector cable, when doing this, check position of wedge.
- Remove gear stick jig.

satelettronica

- Fit gear stick knob and gaiter =>Page 35 .

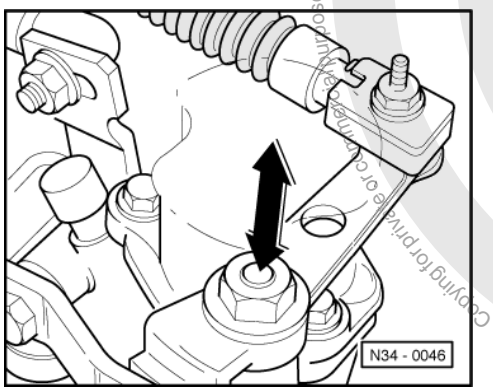
Functional check

- The gear stick lever must rest in the 3rd/4th gear plane with gearbox in neutral.

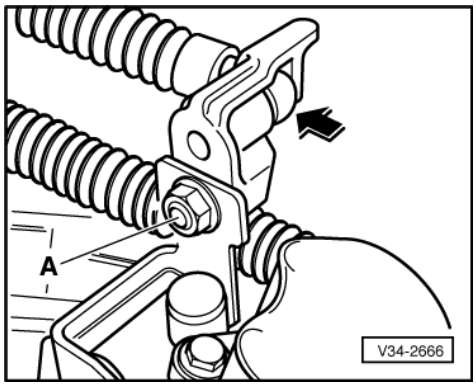
- Operate clutch.
- Select all gears several times. Pay particular attention to the operation of the reverse gear catch.

Should a gear fail to engage smoothly after repeated selection, the selector shaft play (lift) should be checked as follows:

- Engage 1st gear.



- Press gear stick to left onto stop and release.
- At the same time observe selector shaft in gear box (2nd mechanic).
- -> When moving the gear stick the selector shaft must move approx. 1 mm (in direction of arrow).



- -> Should this not be the case, disengage first gear and again loosen nut -A- for the actuating arm/gate selector cable mounting. (The gate selector cable has a certain amount of play at the mounting - due to the transfer elements).
- Take up gate selector cable play, by lightly pressing the mounting towards the bulkhead (direction of arrow).
- Tighten nut -A- in this position.

Notes:

The following are prerequisites for correct gear linkage adjustment:

- Perfect gear linkage operating and transfer elements.
- Rubber bushes for mounting the gear and gate selector cables to all operating elements in good condition (not worn).
- Gear and gate selector cables move smoothly.

Gearbox, clutch and clutch release mechanism must also be in good condition.

satelettronica

2 - Removing and installing gearbox

2.1 - Removing and installing gearbox

Special tools, testers and auxiliary items

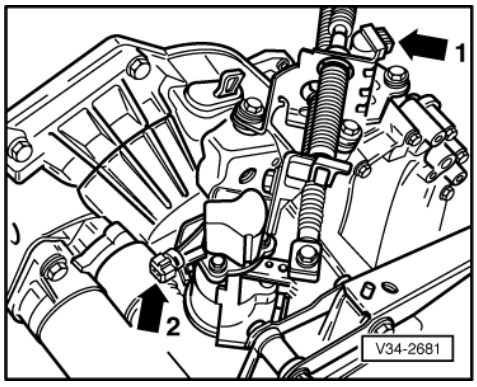
- Gearbox jack V.A.G 1383 A
- Gearbox support 3282
- Adjustment plate 3282/8
- Lifting beam 3336
- Grease G 000 100

Removing

- Disconnect earth strap from battery

Note:

Note radio coding for vehicles with coded radio.

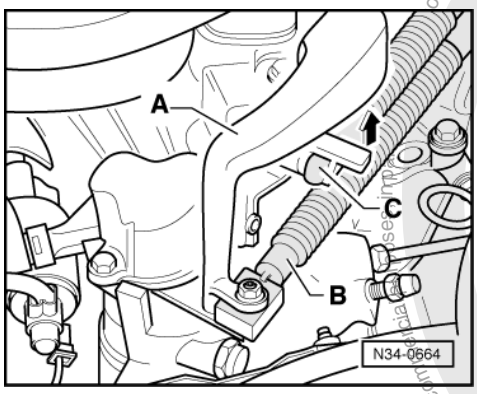


- Remove connecting pipe between charge air cooler and intake manifold pressure hose.

=> Repair group 21; Removing and installing parts of exhaust system Removing and installing parts of exhaust system

- -> Pull connector off road speed sender (arrow 1).

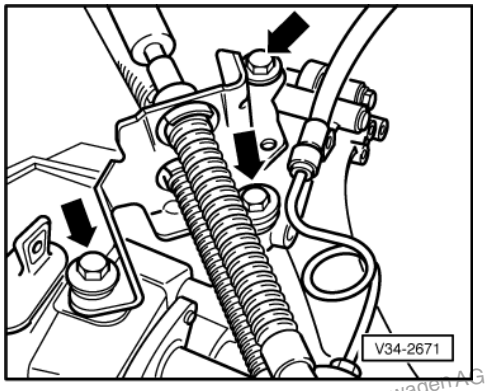
- Pull off reverse light connector (arrow 2).
- Disconnect all other electrical connections and earth wires from gearbox and from the engine/gearbox securing bolts.



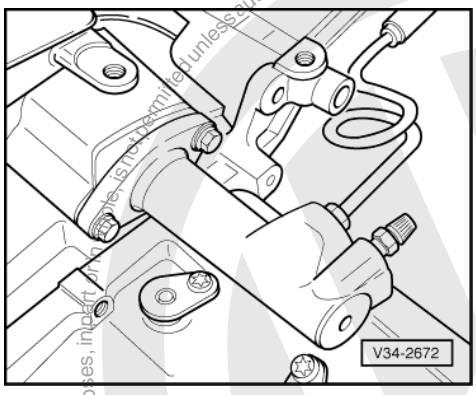
- -> Remove balance weight -A- and gear selector cable -B- from gear selector lever.
- Take off gear selector cable with washer and square nut (self-locking).

satelettronica

- Pull gate selector cable off actuating arm/relay lever -C- to do this lift lug in direction of arrow.



- -> Remove cable support bracket from gearbox (arrows), if necessary unclip hose at cable support bracket first.

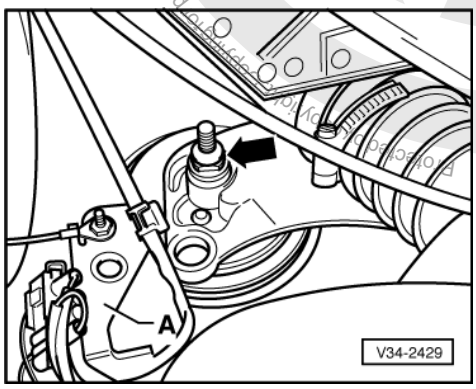


- -> Remove slave cylinder place to side and secure with wire, do not disconnect pipes.

Note:

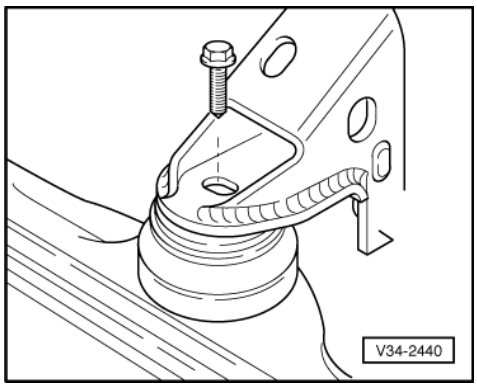
Do not depress clutch pedal.

- Remove air hose from between air cleaner and air intake elbow.



- -> Remove bolt (arrow) on engine console/sub-frame, right. If fitted remove connector mounting plate -A-.

Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

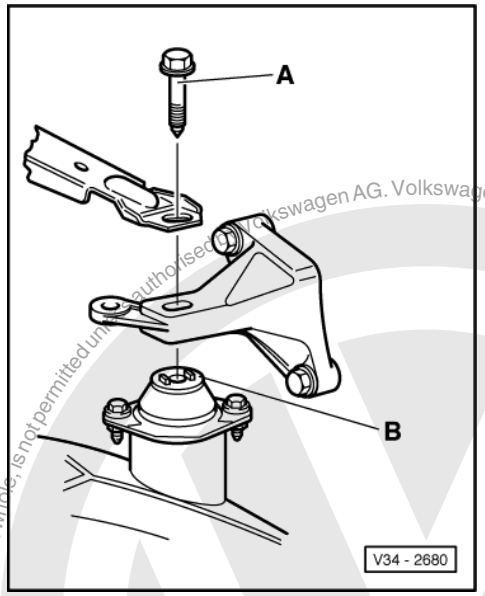


- -> Disconnect engine carrier at front console.
- If fitted remove retaining bracket for coolant hose, coolant pipe and securing plate for electrical connections from front of console.

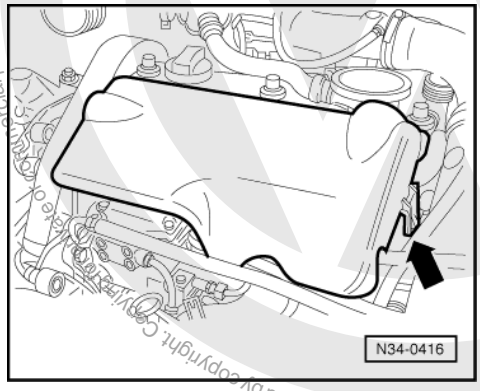
- Remove coolant system expansion reservoir and lay to one side.

Note:

Do not open cooling system.



- -> Remove hexagon bolt -A- from left hand hand assembly mounting -B-.



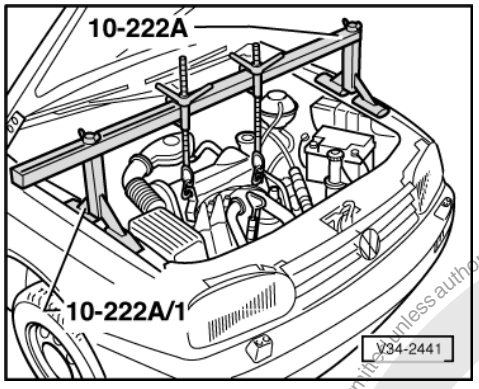
Protected by copyright. Copying for commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

satelettronica

Note:

- -> Remove cover from engine (arrow) if fitted.

- Remove earth strap at engine/gearbox upper securing bolt.
- Remove upper engine/gearbox securing bolts.



- -> Fit support bar 10-222A together with legs 10-222 A/1.
- Take weight of engine/gearbox assembly on the spindles.
- If not already removed, remove wiring and cable from gearbox.

- Remove insulation tray below engine/gearbox, if fitted.
- Remove charge air cooler.

=> Repair group 21; Removing and installing parts of exhaust system Removing and installing parts of exhaust system

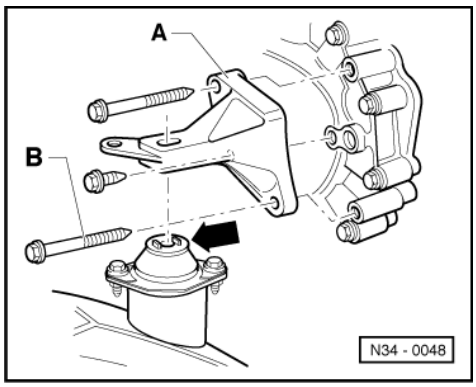
- Remove power assisted steering pipe bracket from starter.
- Remove starter.

=> Repair group 27; Removing and installing starter. Removing and installing starter.

- Remove front console.
- Separate exhaust system in front of catalyst.

=> Repair group 26; Removing and installing parts of exhaust system. Removing and installing parts of exhaust system.

- Remove right hand inner constant velocity joint protective cover from engine if fitted.
- Disconnect drive shafts from drive flanges and tie-up.
- When doing this do not damage surface protection.



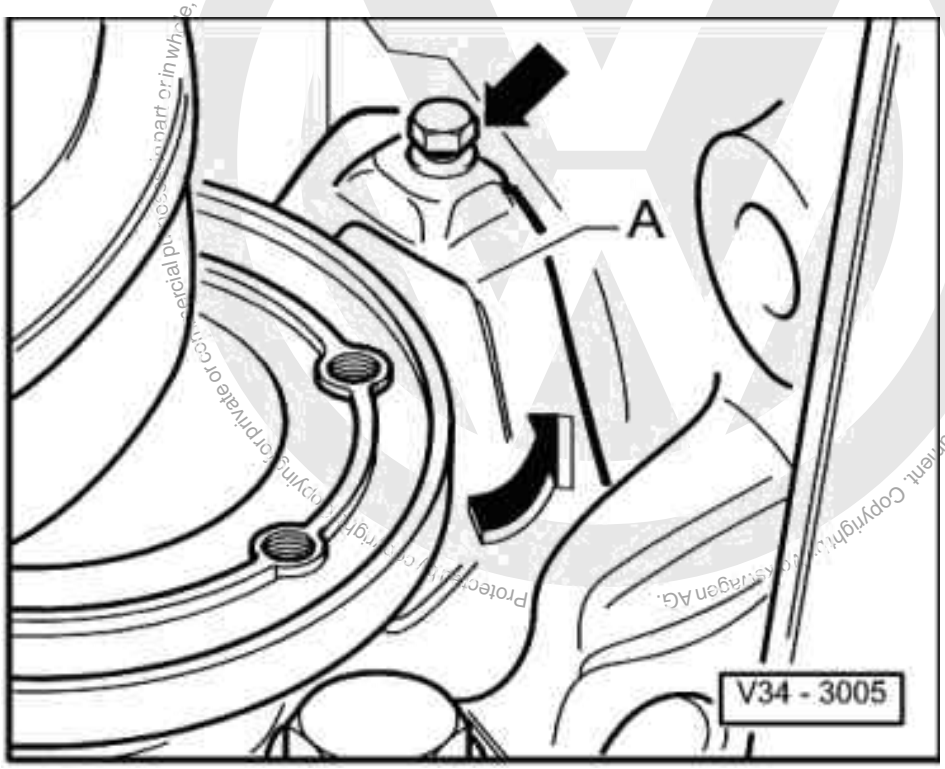
- -> Removing gearbox console -A- from gearbox.

To do this remove gearbox console securing bolt -B- as follows:

- Lift engine/gearbox assembly via both spindles until the exhaust system contacts the heat shield; ensure that selector cable support bracket is not jammed.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

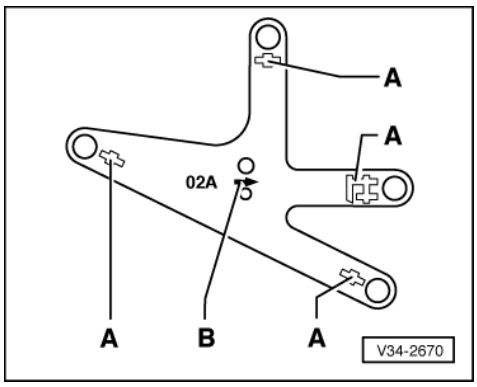
- Push engine/gearbox assembly forwards (2nd mechanic required) and remove lower gearbox console securing bolt -B-.
- Then tie drive shaft up as high as possible. When doing this ensure sufficient clearance between constant velocity joint and flange shaft.



- -> Remove flywheel small cover plate -A- behind the right-hand flanged shaft (arrows).
- Remove large flywheel cover plate.
- Lower engine/gearbox assembly via both spindles to previous position, push as far as possible to the right and lower slightly using left spindle.

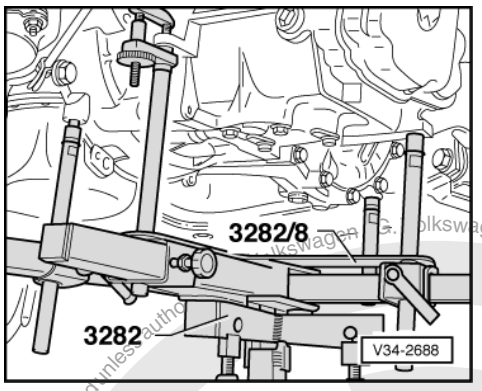
Note:

Do not damage P.A.S. pipe when moving engine/gearbox assembly.



- Assemble gearbox jack with gearbox support 3282, adjustment plate 3282/8 for "02A" gearbox and support elements as follows:
- Place adjustment plate 3282/8 on gearbox support 3282. (Adjustment plate only fits in one position).
- Align arms of gearbox support according to holes in adjustment plate.
- -> Bolt on support elements -A-, as illustrated on adjustment plate.

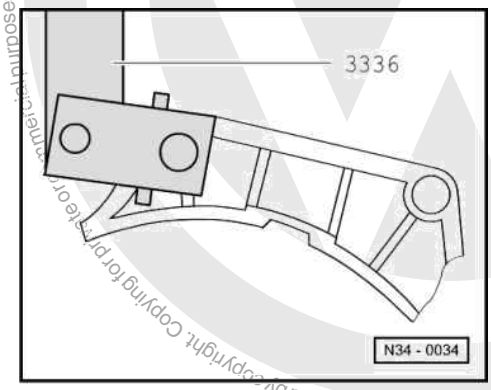
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



- -> Place gearbox jack under vehicle, arrow symbol -B- (=> Illustration V34-2670) on adjustment plate points to front of vehicle.
- Align adjustment plate parallel to gearbox and lock safety supports on gearbox.
- Remove lower engine/gearbox securing bolt.
- Press gearbox off dowels and lower carefully while pushing engine/gearbox assembly forward slightly and constantly correct the position via the gearbox jack spindles.

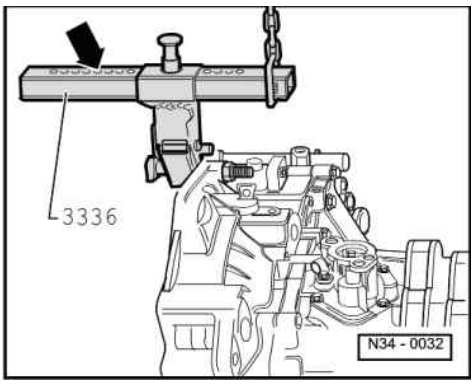
Note:

Do not damage P.A.S pipe when lowering gearbox.



Transporting the gearbox

- -> Bolt gearbox lifting device 3336 to clutch housing.



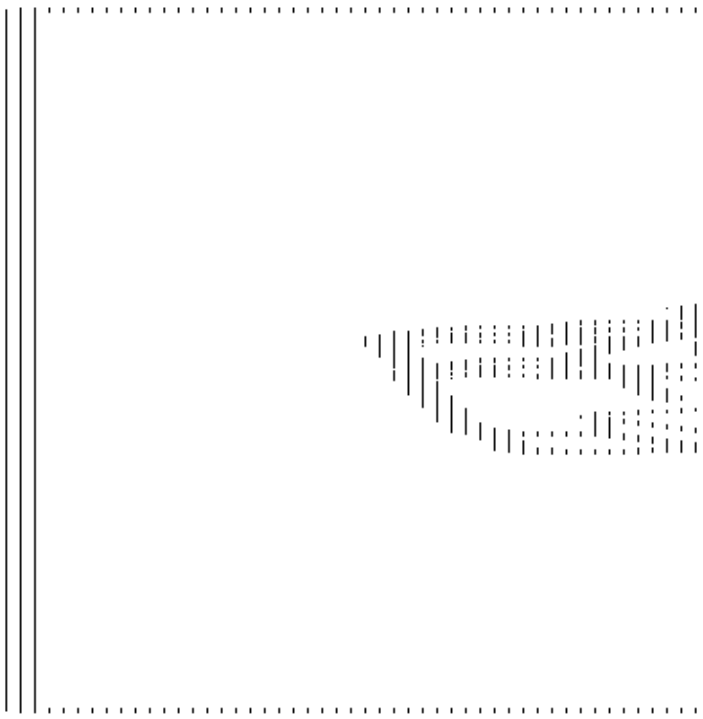
- -> Set support arm on sliding piece with locking pin (arrow).

No. of holes visible = 5

- Take gearbox out with workshop crane and gearbox lifting device 3336
- Place gearbox, for example onto transport container.

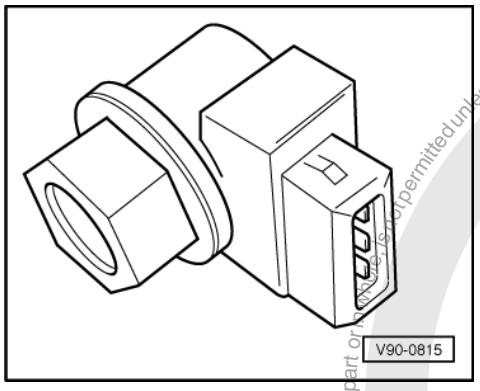
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Installing



Notes:

- -> Before installing gearbox press clutch release lever towards gearbox housing and secure with assembly pin, assembly bolt or M 8 x 35 bolt. Remove after gearbox has been installed. The hole will then be sealed by the 3rd cable support bracket securing bolt or plugged.



- -> When replacing gearbox, the senders for speedometer (Fig.), gear selector and relay lever must be transferred to new assembly.

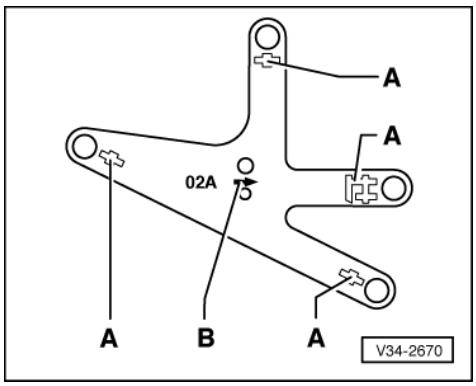
- Clean input shaft splines and lightly grease with G000 100 grease.

The clutch plate must be able to slide lightly to and fro on the input shaft.

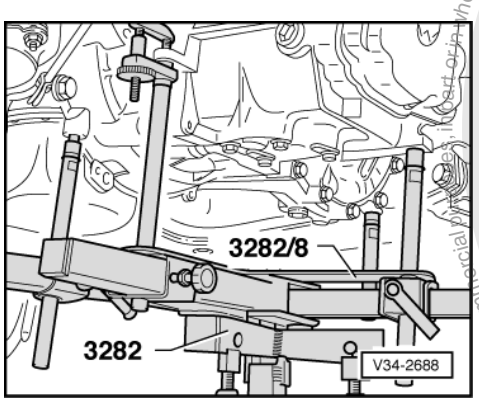
- Check whether dowel sleeves for aligning engine/gearbox are fitted in cylinder block, install if necessary.
- Ensure that the intermediate plate is correctly positioned on engine.
- Assemble gearbox jack with gearbox support 3282, adjustment plate 3282/8 for "02A" gearbox and support elements as follows:

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

satelettronica



- Place adjustment plate 3282/8 on gearbox support 3282. (Adjustment plate only fits in one position).
- Align arms of gearbox support according to holes in adjustment plate.
- -> Bolt on support elements -A-, as illustrated on adjustment plate.

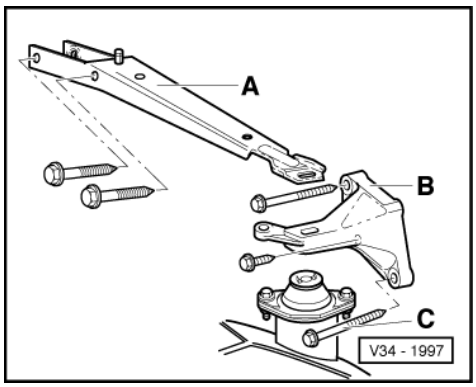


- Place gearbox on gearbox jack.
- Align adjustment plate and gearbox parallel with one another and lock safety supports on gearbox.
- -> Place gearbox jack under vehicle, arrow symbol -B- (=> Illustration V34-2670 on previous page) on adjustment plate points to front of vehicle.
- Insert gearbox.

Note:

Do not damage P.A.S pipe.

- Install lower engine/gearbox securing bolts.



- Install upper engine/gearbox securing bolts.
- -> Install gearbox console -B- and left gearbox support -A-.

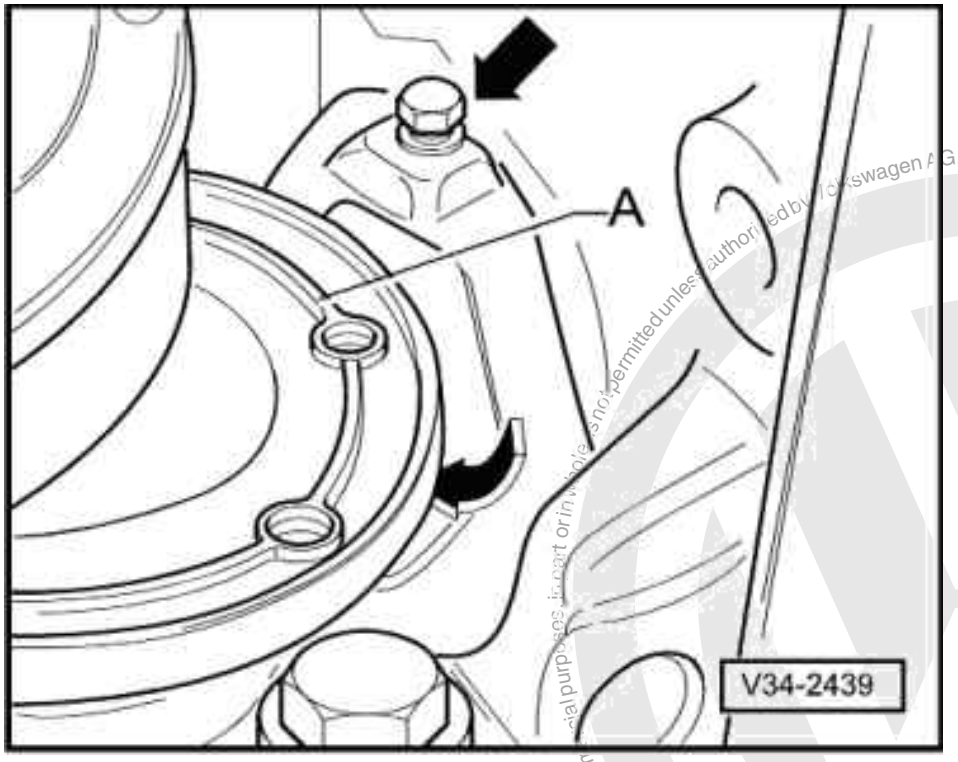
Install gearbox console securing screw -C- as follows:

- Lift engine/gearbox assembly via both spindles and push towards front end (2nd mechanic required) and then install lower gearbox console securing bolt -C-.
- Install front console.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

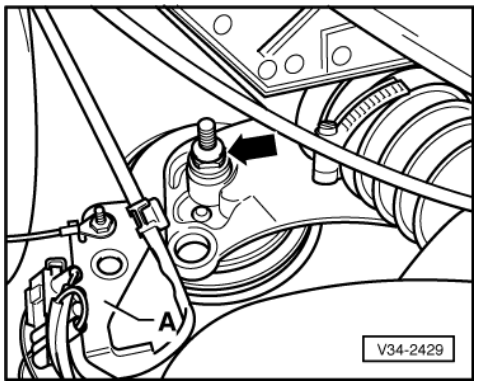
- Install starter.

=> Repair group 27; Removing and installing starter. Removing and installing starter.



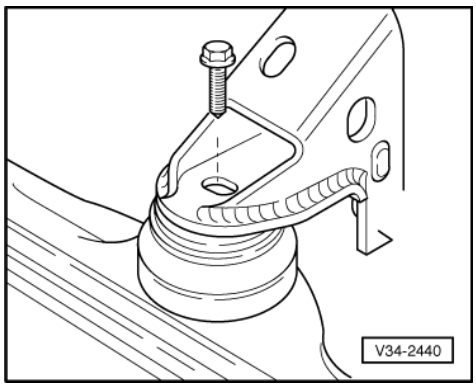
- Align engine/gearbox in installation position.
- Install power assisted steering pipe bracket on starter.
- -> Install small cover plate -A- behind right-hand drive flange (arrows), if fitted.
- Install large clutch cover plate.
- Fit drive shafts to gearbox.
- Install charge air cooler.

=> Repair group 21; Removing and installing parts of exhaust system Removing and installing parts of exhaust system

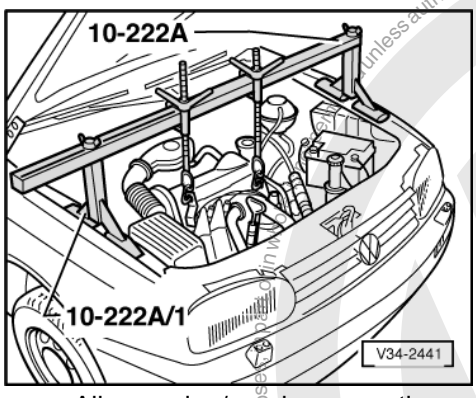


- Install insulation tray below engine/gearbox, if fitted.
- Install left gearbox assembly mounting hexagon bolt.
- -> Install bolt (arrow) on engine console/sub-frame, right. Fit connector mounting plate -A-, if fitted.
- Install air hose between air cleaner and air intake elbow.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

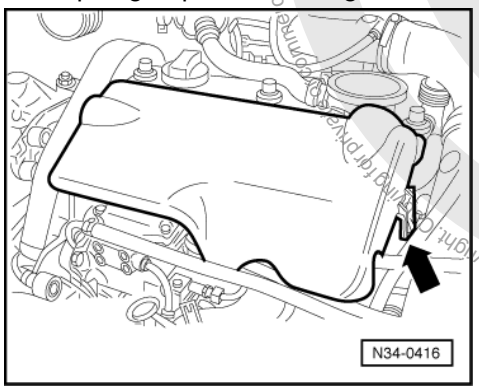


- -> Install front console securing bolt to engine mounting.



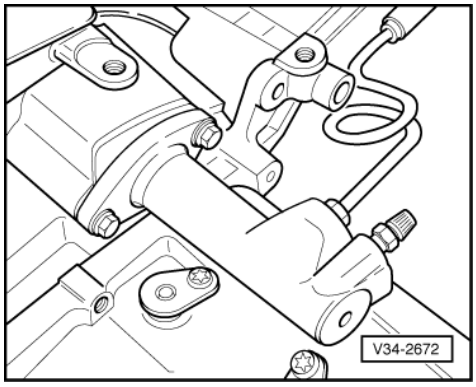
- -> Align engine/gearbox mountings stress-free by shaking assembly and tighten to tightening torque.

=> Repair group 10; removing and installing engine. removing and installing engine.



Note:

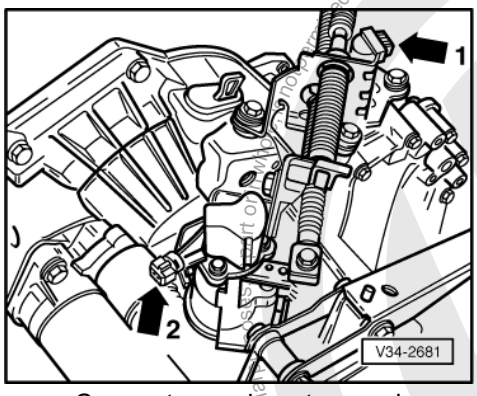
- -> Fit cover on engine if present (arrow).



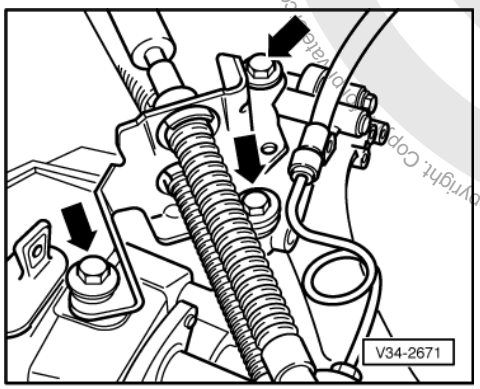
Protected by copyright. Copying for private and commercial purposes, in other media or on websites is prohibited unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.

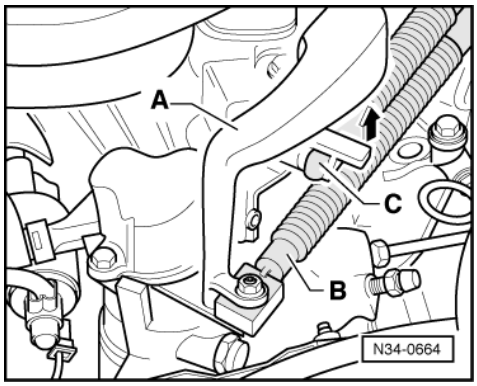
- -> Install slave cylinder



- -> Connect speedometer sender connector (arrow 1).
- Connect reverse light connector (arrow 2).



- -> Install cable support bracket on gearbox (arrows), if necessary push hose onto cable support bracket.



- -> Install gear selector cable -B- and balance weight -A- on gear selector lever.
- Fit gate selector cable on follower/relay lever -C- to do this lift lug in direction of arrow.
- Fit connecting pipe between charged air cooler and intake manifold pressure hose.

=> Repair group 21; Removing and installing parts of exhaust system Removing and installing parts of exhaust system

- Secure coolant system expansion reservoir.
- Reconnect earth strap to battery.

Note:

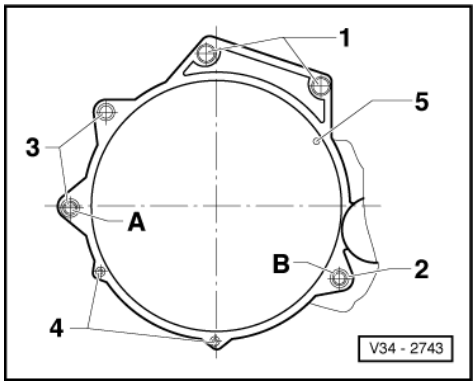
Note radio coding for vehicles with coded radio.

- Checking gearbox oil =>Page 58 .

satelettronica

- Adjusting gear change linkage => Page 43 .

Tightening torques



-> Gearbox to engine

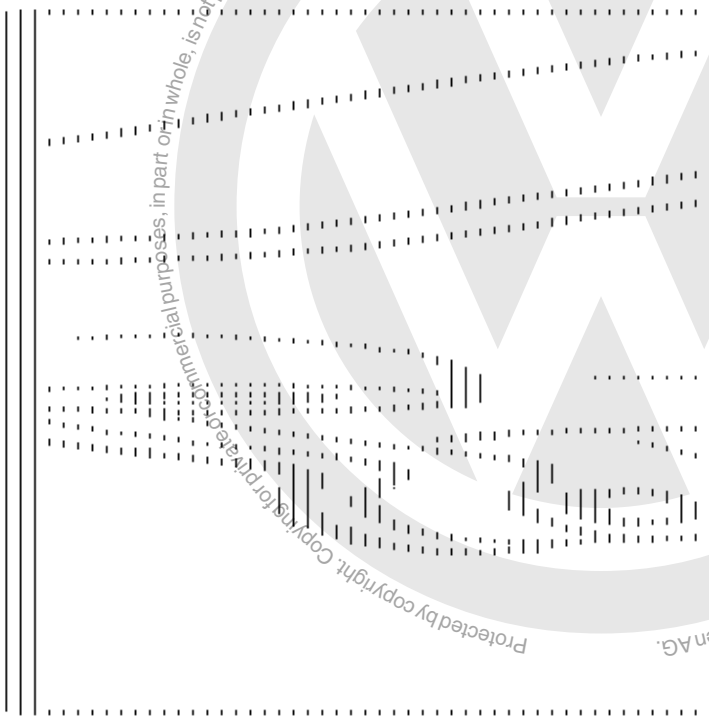
3 - Checking gearbox oil

3.1 - Checking gearbox oil

Gear oil specification => Page 2

- Remove insulation tray below engine/gearbox, if fitted.
- Remove charge air cooler.

=> Repair group 21; Removing and installing parts of exhaust system Removing and installing parts of exhaust system



- -> Remove plug (arrow) to check oil

The oil level is correct when the gearbox is full to the lower edge of the filler hole.

- Fit plug (arrow).

When filling with new oil note following:

- Remove bolt (arrow).
- Top up oil to lower edge of filler hole.
- Fit plug (arrow).
- Start engine, engage gear and allow gearbox to turn for approx. 2 minutes.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- Switch off engine and remove bolt (arrow).

- Top up oil to lower edge of filler hole again.
- -> Fit plug (arrow).

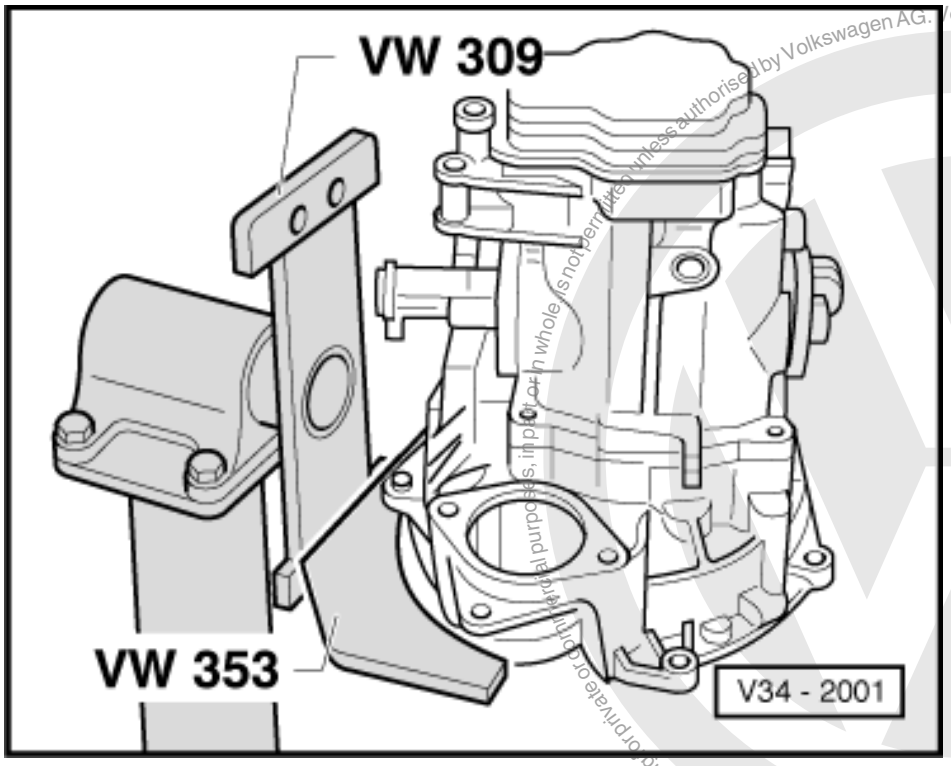
4.5 - Dismantling and assembling sequence

Dismantling and assembling gearbox housing cover, gearbox housing, selector mechanism, input shaft, output shaft (pinion shaft), differential and selector forks

Special tools, testers and auxiliary items

- Retaining plate VW 309
- Gearbox support VW 353
- Drift VW 295
- Fitting sleeve VW 244 b
- Hot air blower V. A. G. 1416



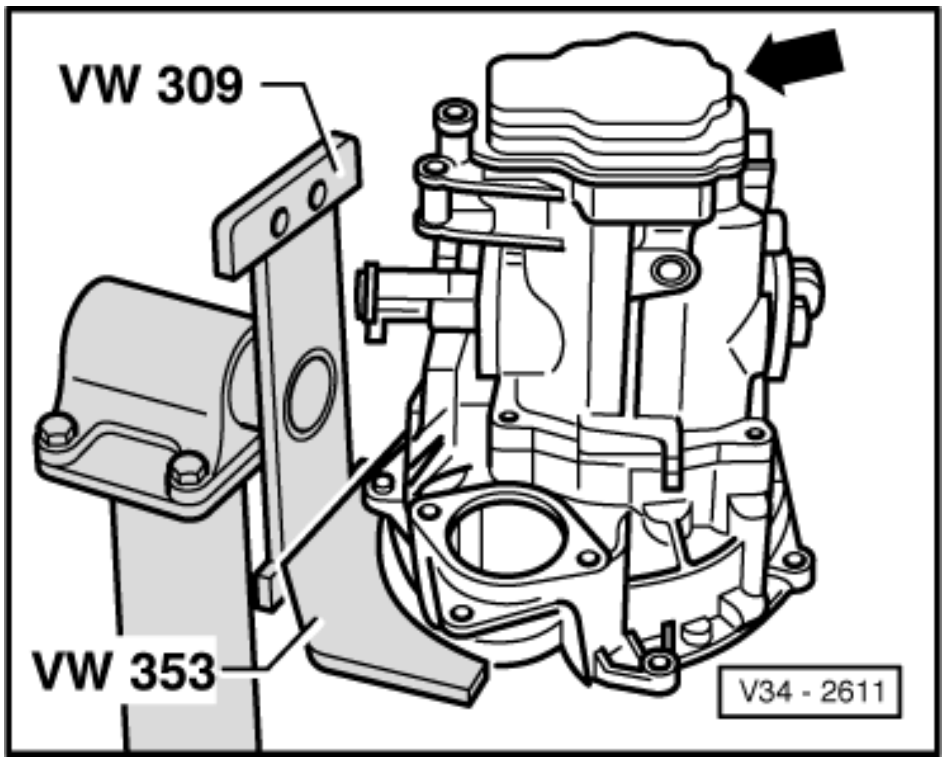
- Stud M 8 x 100 mm
- AMV 188 200 03

Dismantling

- -> Mount gearbox on repair stand.
- Drain gearbox oil.

- Remove clutch release lever and release bearing => Page 19 .

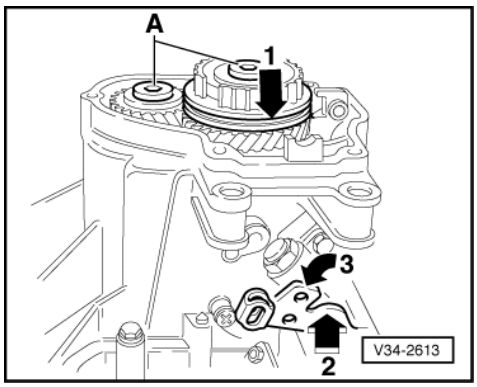
Protected by copyright. Copying for private or commercial purposes, in part or in whole is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



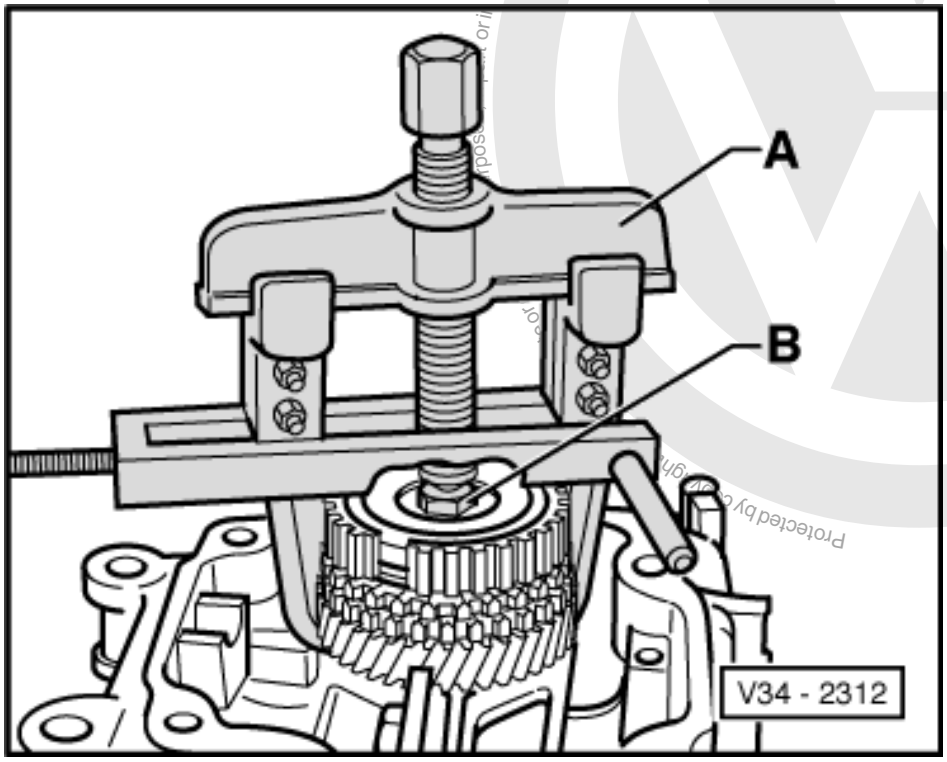
- Remove guide sleeve => Page 19 .
- -> Remove gearbox housing cover (arrow).

- -> Remove 5th gear selector fork (arrow)

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



- -> Remove bolts -A- for synchro-hub and 5th gear, to do this select 5th (arrow 1) and 1st gear (arrows 2 and 3).
- After engaging both gears the input shaft and output shaft are locked, synchro-hub and gear wheel cannot turn. Both bolts can now be loosened.



- -> Pull off synchro-hub and 5th gear wheel and remove together with needle roller bearing.

A - Two arm puller e.g. Kukko 20/10 with Matra V/170 hooks.
B - Hexagon bolt M10 x 20

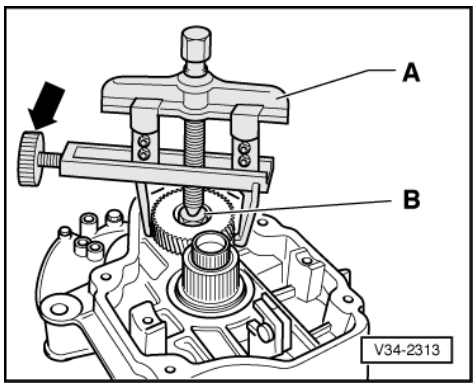
satelettronica

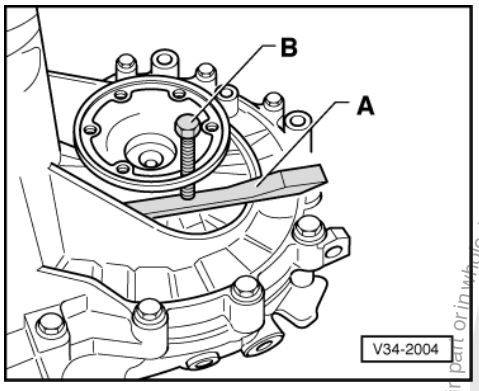


- -> Pull off 5th gear wheel

A - Two arm puller e.g. Kukko 20/10 with Matra V/170 hooks.
B - Hexagon bolt M10 x 20
Sequence for removing:
Fit two arm puller and centralize by turning screw (arrow). Heat gear wheel with hot air blower V.A.G 1416 and pull off.

Note:

When pulling off the gear wheel ensure that the hooks do not bend outwards, if necessary tighten screw (arrow). After 5th gear wheel has been removed check for damage.



- -> Remove left flange shaft

Gearbox without springs behind flange shafts:

- Place a chisel or distance piece -A- under the flange shaft and pull flange shaft out of the sun wheels by turning bolt -B-

Note:

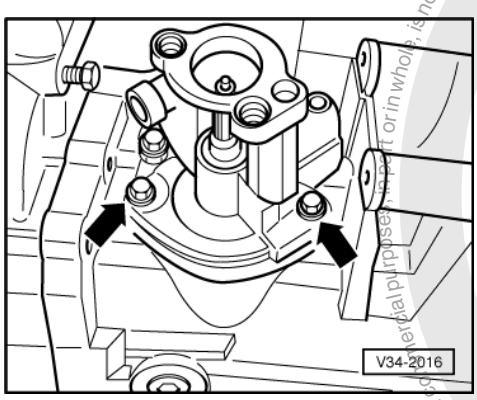
If when removing the flange shaft it does not come out square, insert a bolt in the opposite hole to assist removal.

Gearbox with springs behind flange shafts:

- Before taking flange shaft out remove cone head bolt.

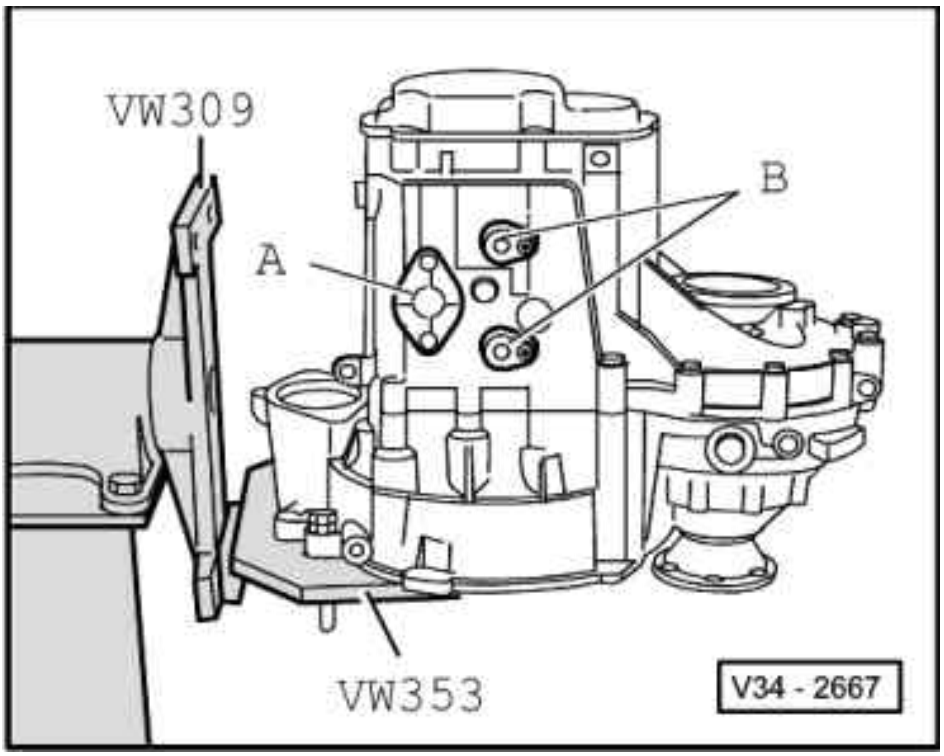
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- -> Remove both reverse shaft support bracket bolts (arrows).

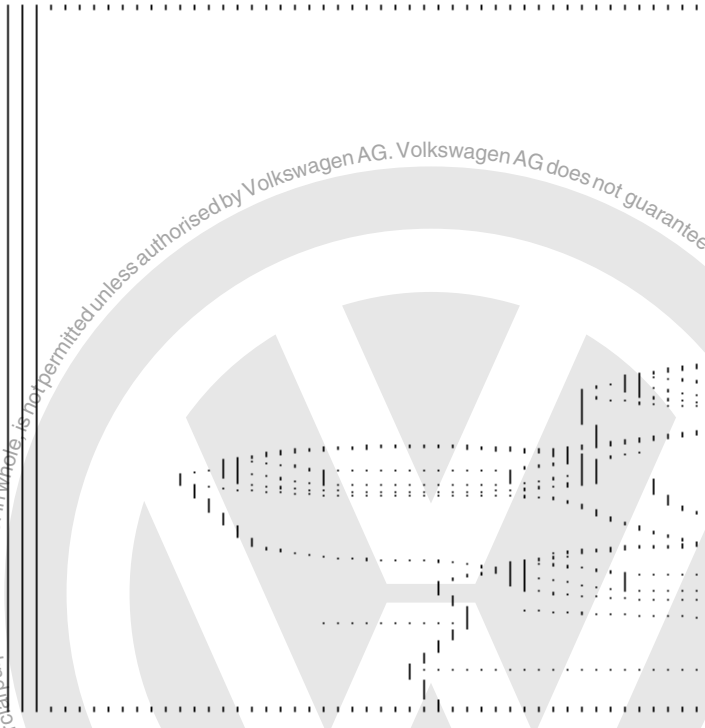


- -> Remove selector shaft with selector mechanism cover, to do this place selector shaft in neutral position. Then remove bolts (arrows) and pull selector shaft out of the gearbox housing.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



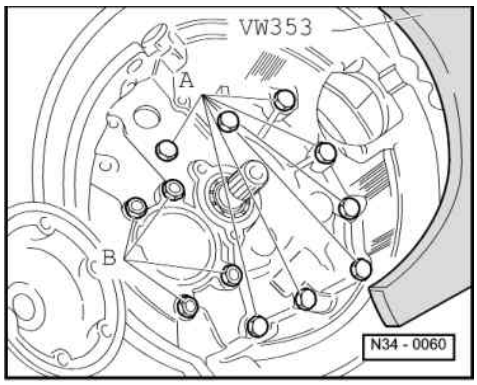
- -> Remove cover plate -A- and pivot pins -B- from underside of gearbox.



- -> Remove pivot pins -A- on top side of gearbox and gearbox housing to clutch housing securing bolts -B- in area of differential.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

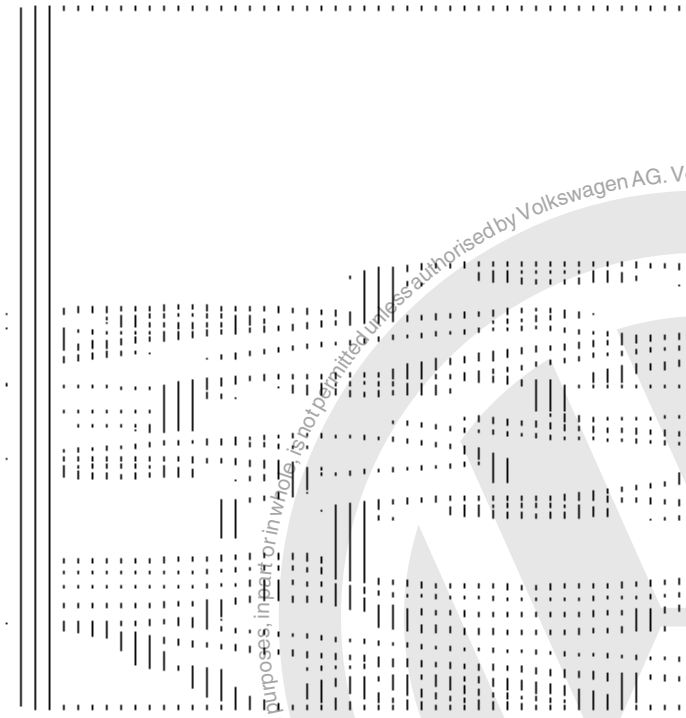
satelettronica



- -> Remove bolts -A-, from inside clutch housing for securing clutch housing to gearbox housing.

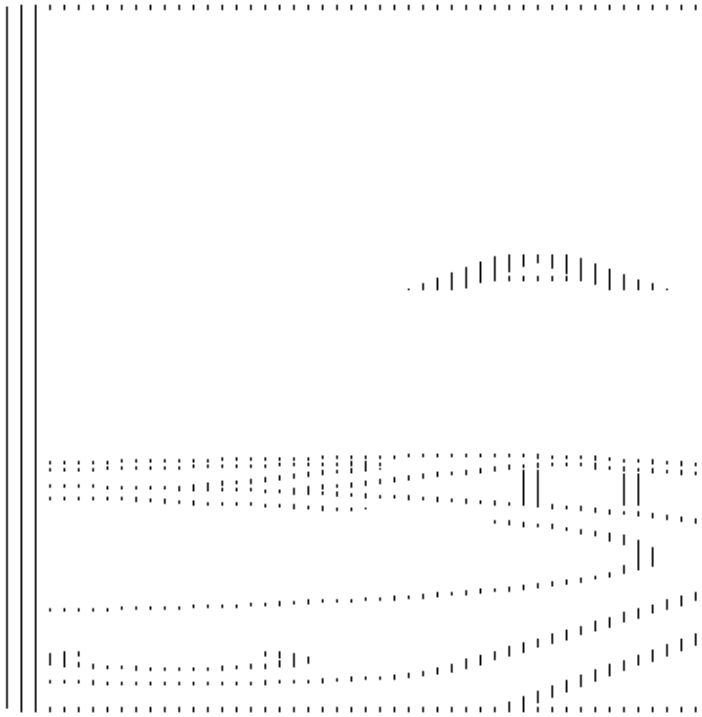
Note:

Do not remove nuts -B- for output shaft bearing support.

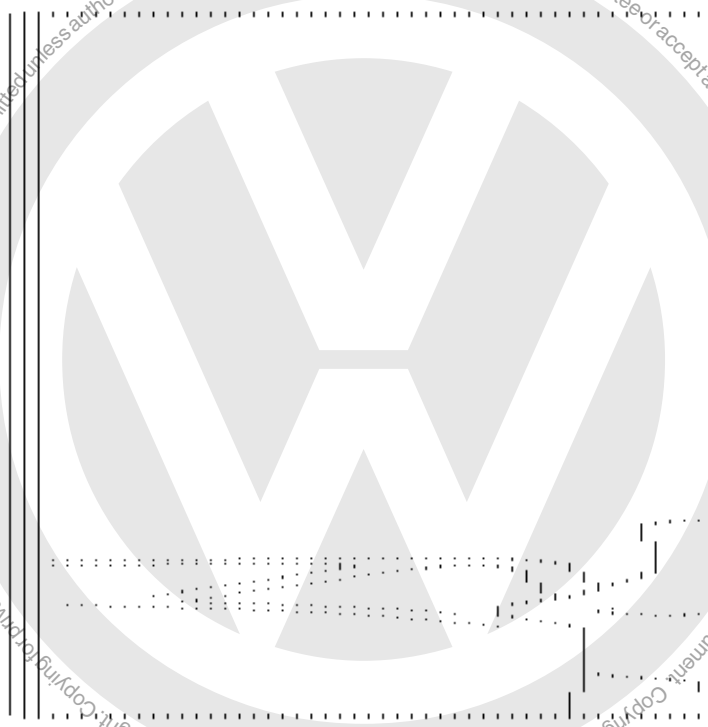


- -> Take-off gearbox housing, if necessary carefully lever up all round and alternating between sides on the protruding housing flange (arrows), being careful not to damage sealing surfaces.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica



- -> Remove selector forks -A- together with selector plates.
- Unscrew bolt for selector mechanism for reverse gear -B-.



- Remove nuts for output shaft bearing support (=>Item -B-, Illustration N34-0060, Page 76)
- -> Remove reverse gear -A-, input shaft -B- and output shaft -C- one after the other from clutch housing.
- Remove right-hand end flange shaft and differential.

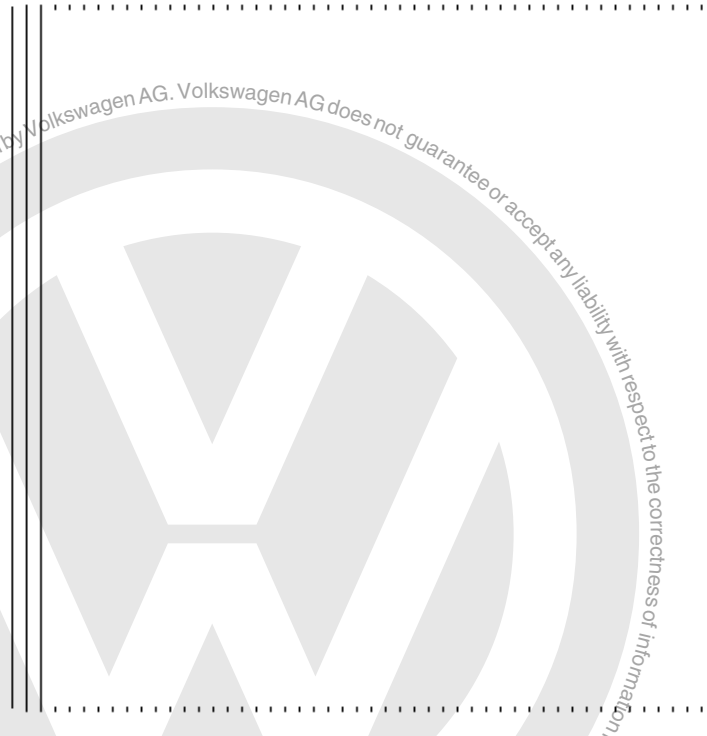
satelettronica

Note:

Removing right-hand flange shaft is identical to left-hand flange shaft =>Page 73 .

Assembling

- Install differential.



- -> Always renew sealing rings (arrows) for output shaft bearing support.

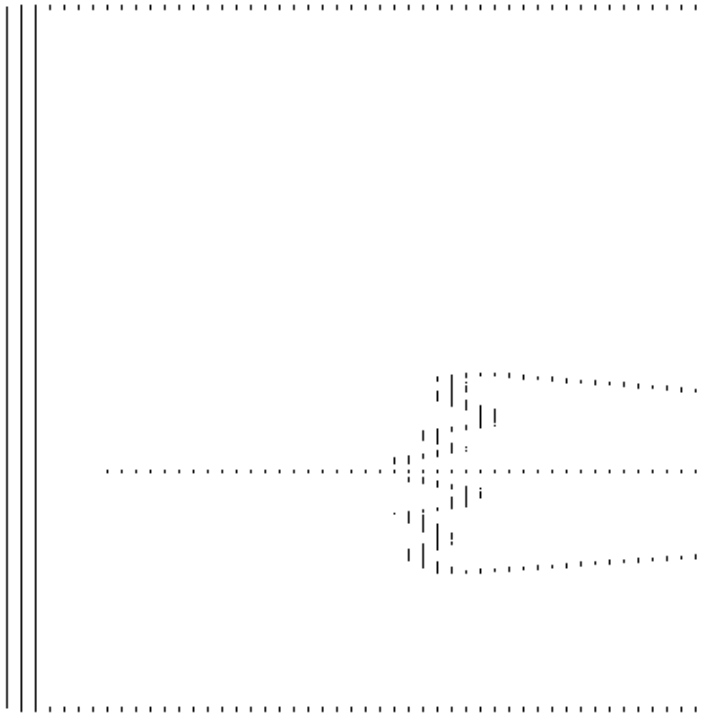
Note:

The illustration only shows 3 of the 4 sealing rings.

- Install input shaft, output shaft and reverse shaft together.
- Tighten nuts for output shaft bearing support.
- Clean locking fluid remnants from threads in the reverse shaft support (arrow Illustration V34-2293, Page 80). The remnants can be removed using a tap.

Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.

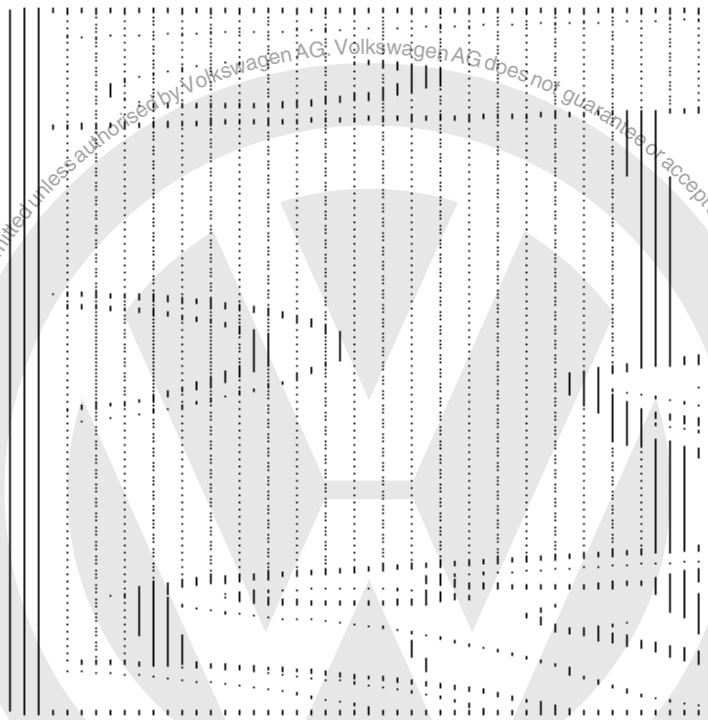
satelettronica



- Install reverse shaft support.
- Install reverse gear selector mechanism.

-> Installation position reverse gear

- Install selector forks together with selector plates.



- -> Screw M 8 x 100 mm studs -A- into reverse shaft support so that the shaft is aligned after fitting gearbox housing.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

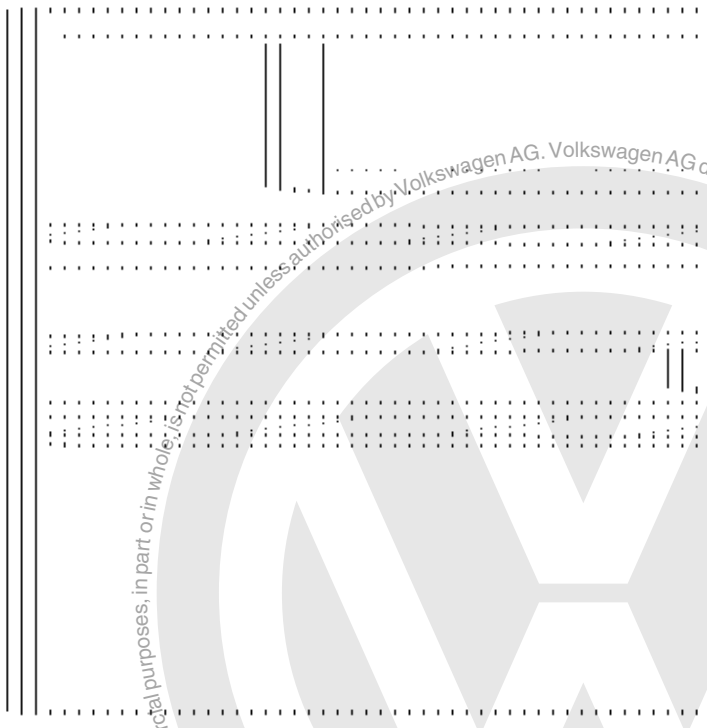
satelettronica

- Align selector plates.

Note:

The selector segments must be positioned in the grooves on the locking collars.

- Fit gearbox housing.



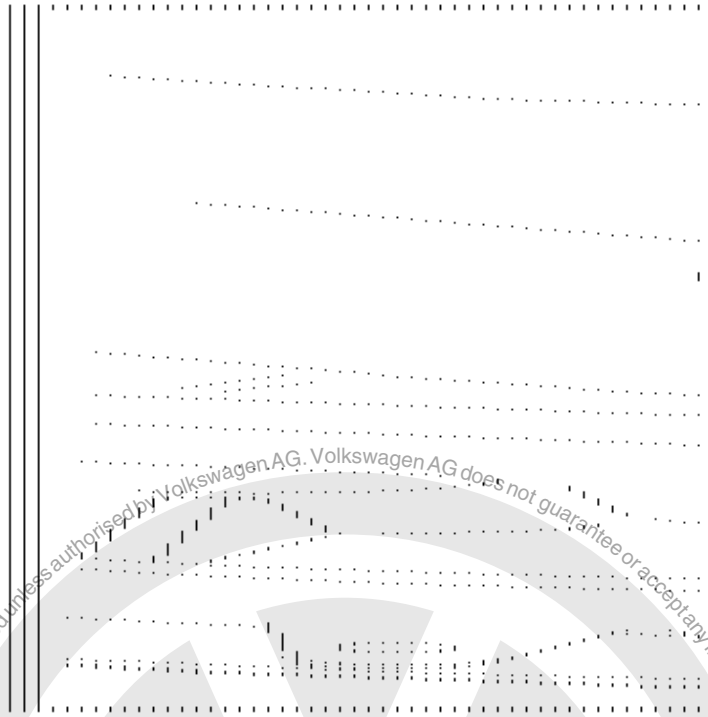
Install reverse shaft support bolts (arrow) as follows:

- -> Insert bolt -a-, remove stud (=> Illustration V34-2008), insert bolt -b- and hand tighten.

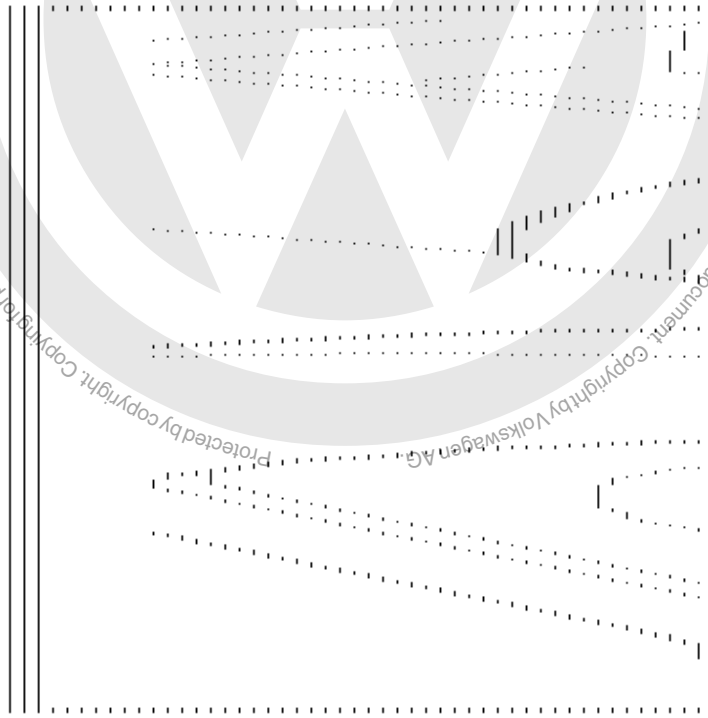
  Tightening sequence:
  1 - Bolt -a- 30 Nm
  2 - Bolt -b- 30 Nm

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

satelettronica



- -> Install pivot pin (arrow) for selector forks. To do this align selector mechanism with a screwdriver, so that the relevant pivot pin can be installed.
- Fit selector shaft cover



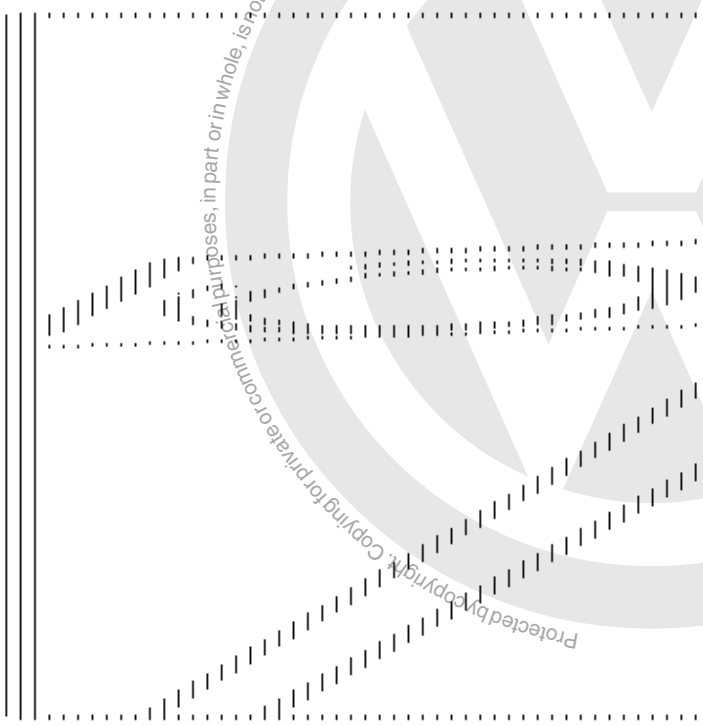
-> Install selector shaft as follows:

- Place selector plates in neutral.
- Locate lug (arrow 1) in the recess in gearbox housing. Position selector shaft so that selector finger (arrow 2) is inserted in the selector plates.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

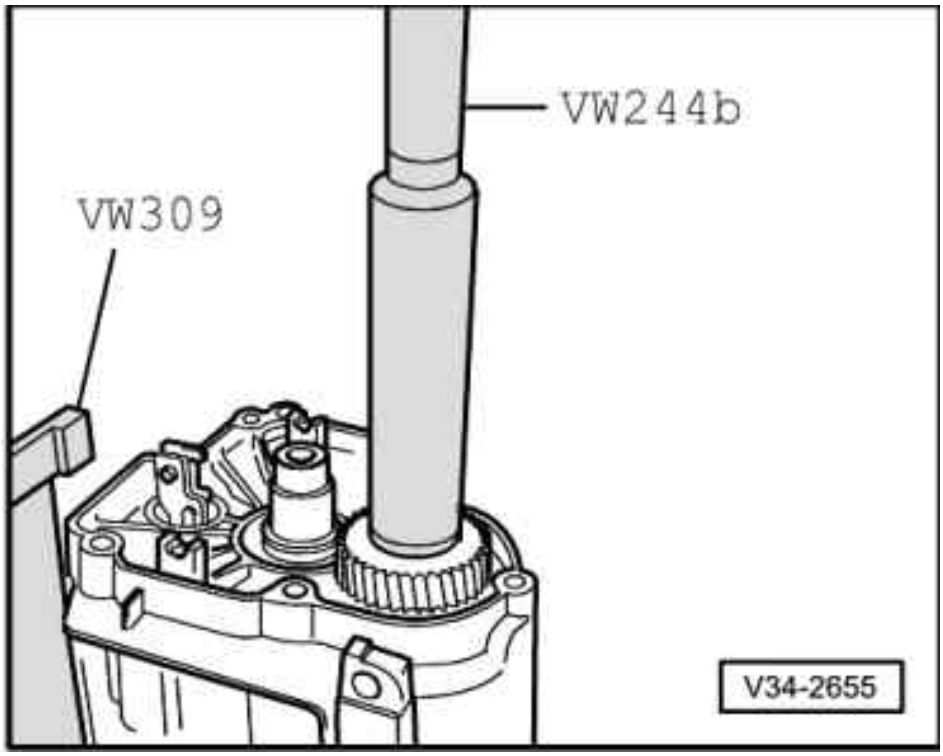
satelettronica

- Install selector shaft cover.



-> Installation position 5th gear wheel

The circumferential groove (arrow) faces to gearbox housing.



- -> Knock-on 5th gear wheel.

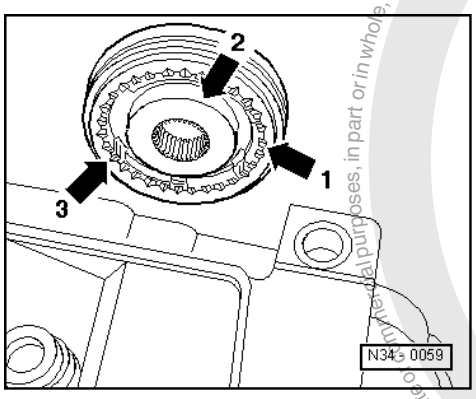
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Checking 5th gear synchro-ring

- -> Before installing 5th gear wheel and synchro-ring press the synchro-ring onto the cone of the gear wheel and measure gap -a- with a feeler gauge.

Gap -a-	New	Wear limit
5th gear	1.1 ... 1.7 mm	0.5 mm

- Install 5th gear wheel with needle roller bearing
- Place 5th gear synchro-ring on gear wheel
- Assembly 5th gear synchro-hub/locking collar before installing => Page 118 .

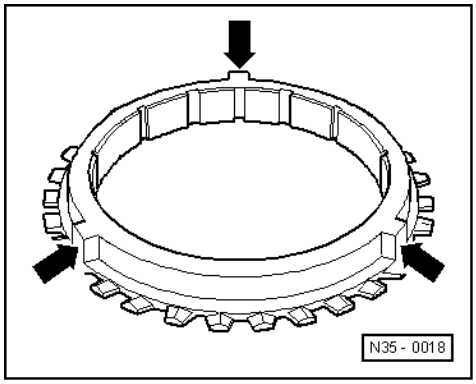


-> Installation position 5th gear synchro-hub/locking collar

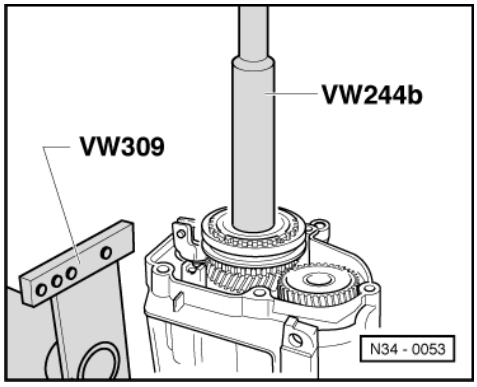
The pointed teeth of the locking collar (arrow 1) and the high shoulder of the synchro-hub (arrow 2) face the gearbox housing.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

The syncro-hub mountings (arrow 3) align with the synchro-ring cast locking pieces (=>arrows on Illustration N35-0018, Page 84).



-> 5th gear synchro-ring with cast locking pieces (arrows)



- -> Knock-on 5th gear synchro-hub

Note:

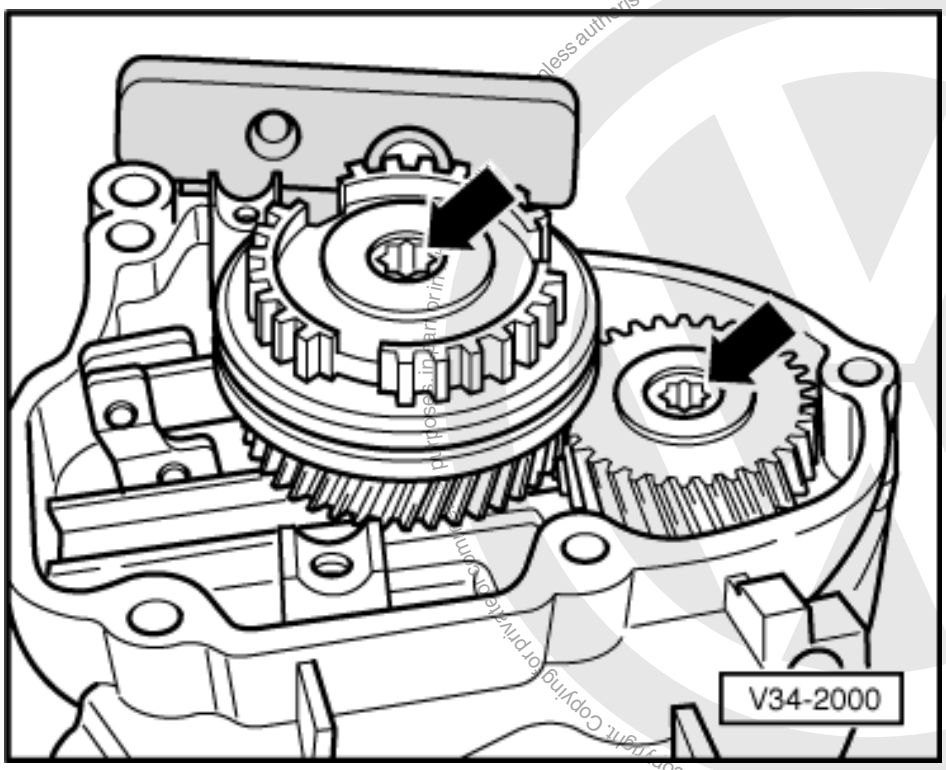
When driving on ensure synchro-ring is free to move.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- Screw-in securing bolts for synchro-hub and 5th gear wheel.

-> Installation position of dished spring for gear wheel and 5th gear synchro-hub securing bolts:

The outer diameter (concave side -arrows-) faces 5th gear.



- -> Engage two gears before tightening 5th gear synchro-hub and gear wheel securing bolts (arrows) (=>Illustration 34-2613, Page 72)
- Install 5th gear selector fork.

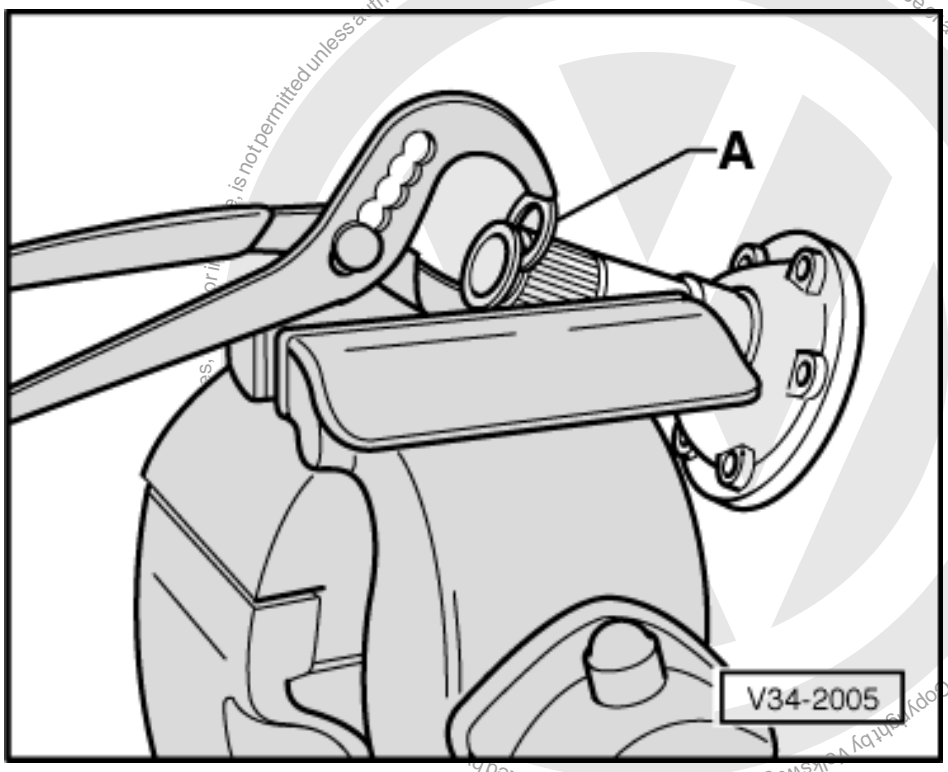
satelettronica

-> Adjusting 5th gear:

- Engage 5th gear. Loosen bolt -1-. Press locking collar and selector fork jaws in direction of arrow, then tighten bolt -1- to 25 Nm.

• Check measurement :
It must not be possible to slide a 0.2 mm feeler gauge between locking collar and gear wheel. If necessary repeat adjustment.

- Disengage 5th gear. Locking collar must now be in the neutral position. Synchro-ring must move freely.
- Fit gearbox housing cover



Gearbox without spring behind flange shafts:

- -> Replacing flange shaft circlip. Clamp flange shaft using vice clamps, in vice. Press old circlip out of flange shaft groove with new circlip -A-.
- Drive in flange shaft with e.g. drift VW 295.

Gearbox with springs behind flange shafts:

- Installing complete flange shaft => Page 64

- Fit release bearing guide sleeve => Page 19 .
- Fit clutch release lever and release bearing => Page 19 .

satelettronica

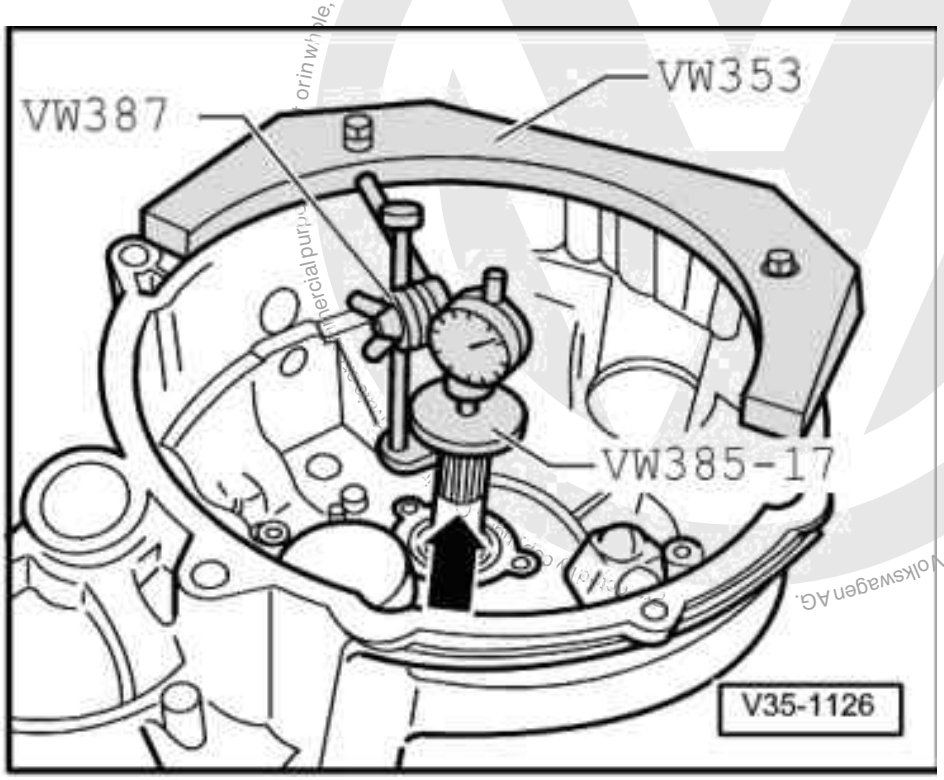
- Press taper roller bearing outer race without shim into gearbox housing onto stop, using VW 510.
- Install input shaft in clutch housing and assemble gearbox housing. Tighten hexagon head bolts to 25 Nm and then turn 90° further.
- -> Fit measuring appliance and D.T.I. in clutch housing (large taper roller bearing in gearbox housing).
- Before taking any measurements rotate input shaft to allow bearing to settle. Set D.T.I. to "O" with 1 mm preload.



Warning!
This procedure must be repeated for each measuring process, otherwise the gauge will not return to original position.

- -> Press input shaft in direction of D.T.I. (arrow).
- Read off and note clearance indicated on D.T.I. (example 1.21).

Note:

D.T.I. does not return to original position.

- Determine thickness of shim from table => Page 119 (example 1.175).
- Remove input shaft and press taper roller bearing outer race out of gearbox housing using VW 447i .
- Press taper roller bearing outer race together with the 1.175 shim into gearbox housing.
- Assemble gearbox housing and tighten hexagon head bolts to 25 Nm and then turn 90° further.

2.2 - Table of adjustment shims

Measured	Shim

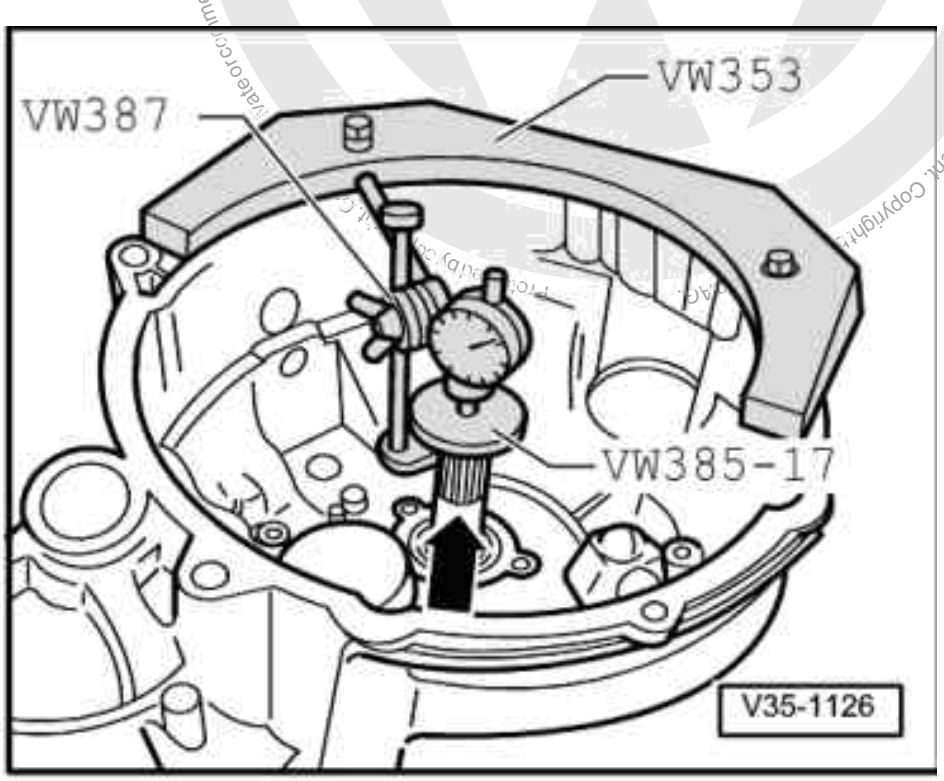
2.3 - Carrying out check measurement



- -> Install measuring appliance and D.T.I.
- Rotate input shaft so that the taper roller bearing settles.
- Press input shaft in direction of arrow.
- Bearing play should be min. 0.01 ... max. 0.09 mm.

Note:

If the bearing clearance cannot be measured, but input shaft play is perceptible and the input shaft turns freely, the adjustment is acceptable.

4 - Adjusting output shaft

4.1 - Adjusting output shaft

(Determining thickness of output shaft shim)

It is necessary to readjust the output shaft when the following components are renewed:

- Final drive
- Clutch housing

or

- Taper roller bearing

Adjustment overview => Page 173

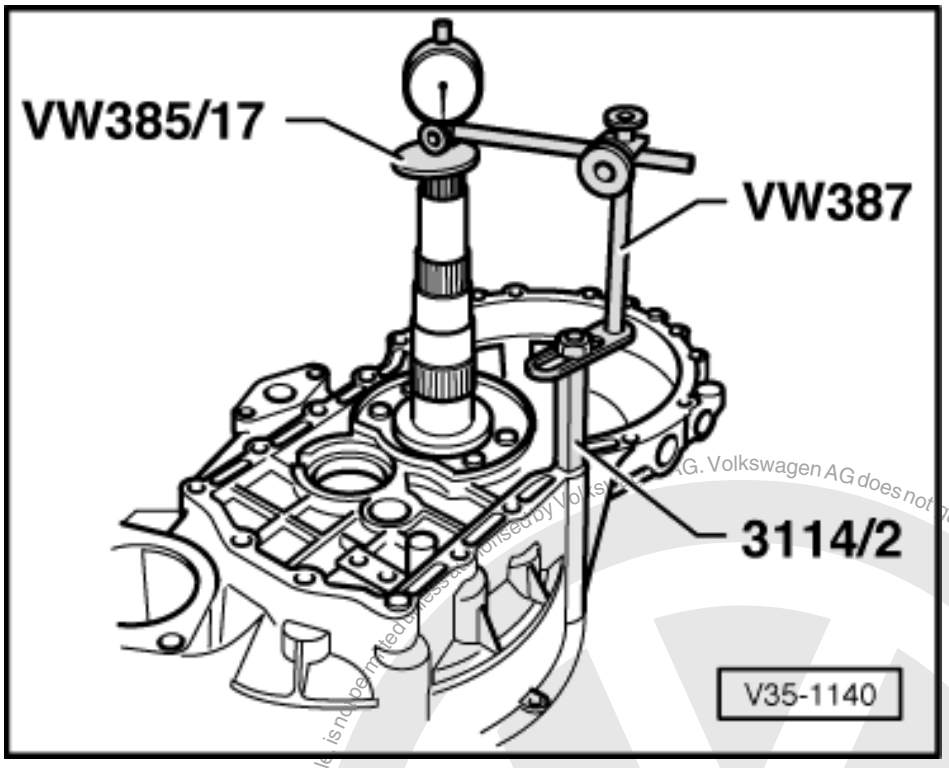
Special tools, testers and auxiliary items

- Universal dial gauge bracket VW 387
- Measuring plate VW 385/17
- Dial gauge
- Press disc VW 512

satelettronica

- Straightening tool 3114/2

- Press small taper roller bearing outer race together with a 0.65 mm thick shim fully into clutch housing=>Page 133 .
- Insert output shaft and tighten bearing support to 25 Nm and then turn 90° further.



- -> Mount D.T.I. (3 mm measuring range) and "O" with 1 mm preload.
- Move output shaft up and down and note dial gauge reading (example: 0.30 mm).

Warning!
Do not rotate output shaft during measurement as this will cause the bearings to settle, resulting in incorrect reading.

Determining thickness of shim

The specified bearing preload is obtained by adding
a constant preload figure of (0.20 mm)
to the reading obtained (0.30 mm)
and the thickness of the shim installed (0.65 mm).

Example:

Shim installed	0.65 mm
+ Reading	0.30 mm
+ Preload (constant)	0.20 mm
Thickness of shim	1.15 mm

- Remove output shaft and pull out small taper roller bearing outer race => Page 132

The following adjustment shims are available:

Size (mm)	Part No.
0.65	020 311 391 P
0.70	020 311 391 Q

satelettronica

Size (mm)	Part No.
0.75	020 311 391
0.80	020 311 391 A
0.85	020 311 391 B
0.90	020 311 391 C
0.95	020 311 391 D
1.00	020 311 391 E
1.05	020 311 391 F
1.10	020 311 391 G
1.15	020 311 391 H
1.20	020 311 391 J
1.25	020 311 391 K
1.30	020 311 391 L
1.35	020 311 391 M
1.40	020 311 391 N

Varying tolerances make it possible by measuring the shims to obtain the exact shim thickness required.

- Press in small taper roller bearing outer race together with the correct shim (in example 1.15 mm) (=>Page 133) and install output shaft. Tighten bearing support nuts in clutch housing to 25 Nm and then turn 90° further.

39 - Final drive, Differential

1 - Renewing flanged shaft oil seals (gearbox installed)

1.1 - Renewing flanged shaft oil seals (gearbox installed)

1.2 - Renewing oil seals on gearboxes without springs behind flanges

- Observe general repair instructions
  => Page 5 .

Special tools, testers and auxiliary items

◆ Drive sleeve 2035

Removing

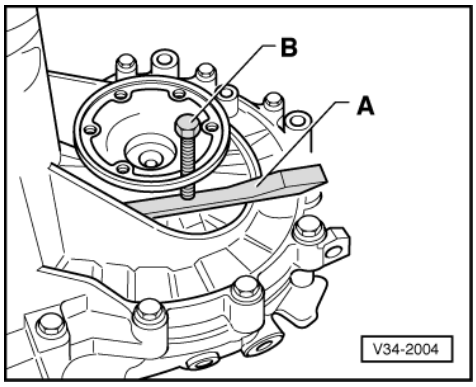
◆ Before replacing left-hand oil seal:

- Remove drive shaft

=> Running gear; Repair group 40

◆ Before replacing right-hand oil seal:

- Turn steering to right onto full lock stop.
- Remove drive shaft protective cover from engine.
- Disconnect drive shaft from flanged shaft.

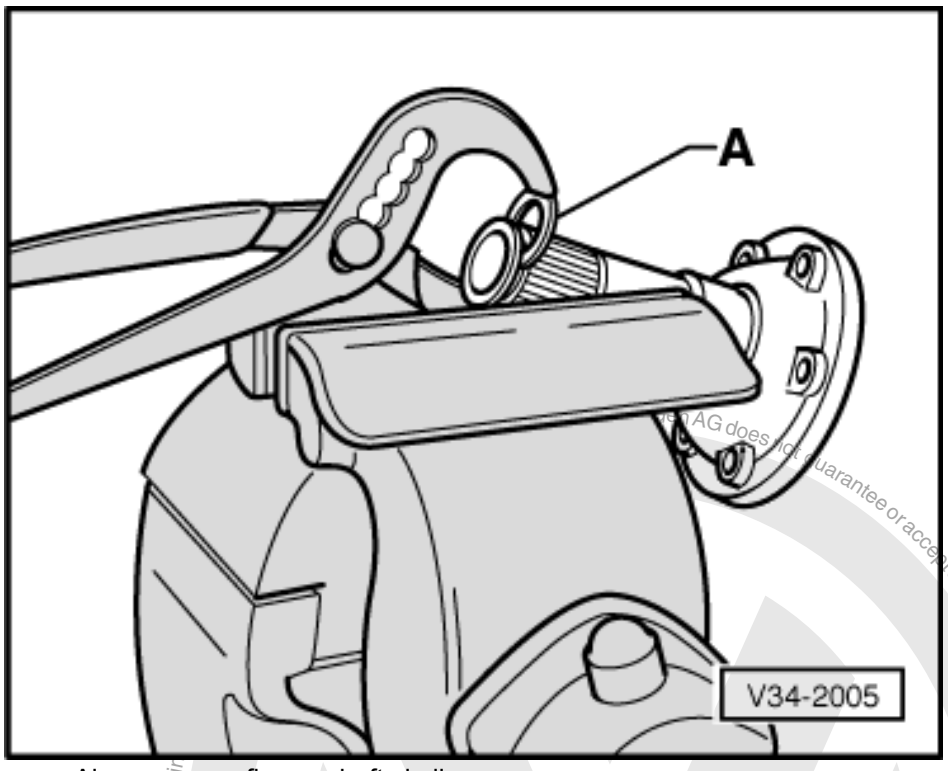


- Tie-up drive shaft as high as possible. Do not damage paint on drive shaft.
- -> Place a chisel or distance piece -A- under the flange shaft and pull flange shaft out of the sun wheels by turning bolt -B-.

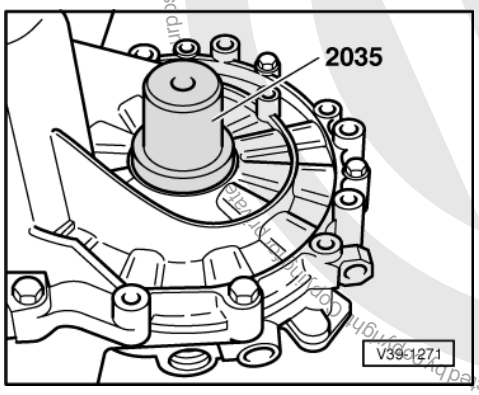
Note:

If when removing the flange shaft it does not come out square, insert a bolt in the opposite hole to assist removal.

satelettronica



- -> Always renew flange shaft circlip.
- Clamp flange shaft in vice, using vice clamps. Use new circlip -A- to press old circlip out of groove in flange shaft.
- Pull out flange shaft oil seal with VW 681.



Installing

- -> Knock new flange shaft oil seal in flush, do not cant seal when doing this.
- Fill space between sealing and dust lips with multi-purpose grease.
- Knock flange shaft in with drift VW 295.
- Install left-hand drive shaft or reconnect right-hand drive shaft to flange shaft.
- Bolt on drive shaft protective cover if required.
- Top up gear oil => Page 58

Tightening torques

Drive shaft to flange shaft	45 Nm
Drive shaft protective cover to engine	35 Nm

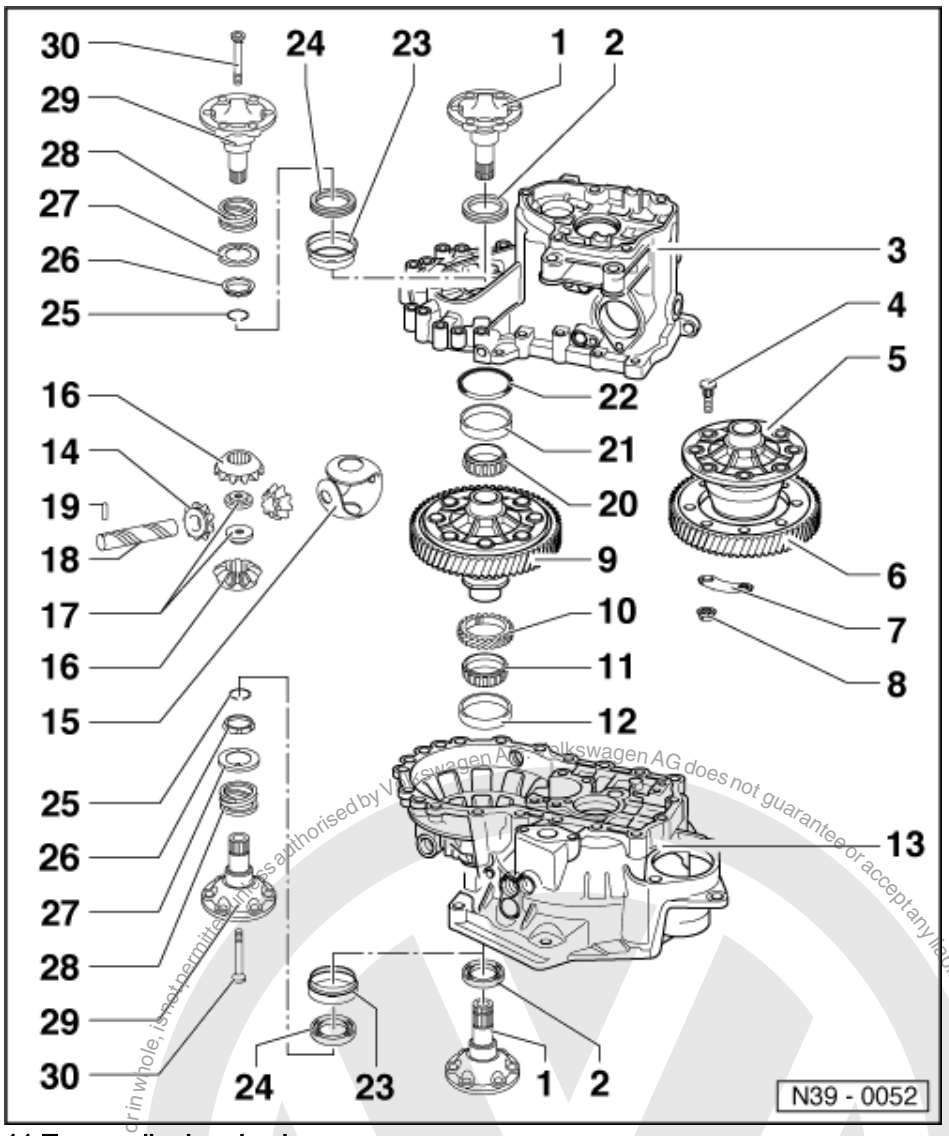
9 Differential housing

- With rivetted final drive gear
- When renewing final drive gear drill out rivet heads => Fig. 8
- Attaching final drive gear with bolts => Fig. 8
- Both sides are chamfered to accept taper rings (item 26) in gearboxes with springs behind flange shafts => Fig. 7

10 Speedometer drive wheel

- Fit on differential housing before pressing on inner race

satelettronica



11 Taper roller bearing inner race
- Pulling off => Fig. 3
- Pressing on => Fig. 4

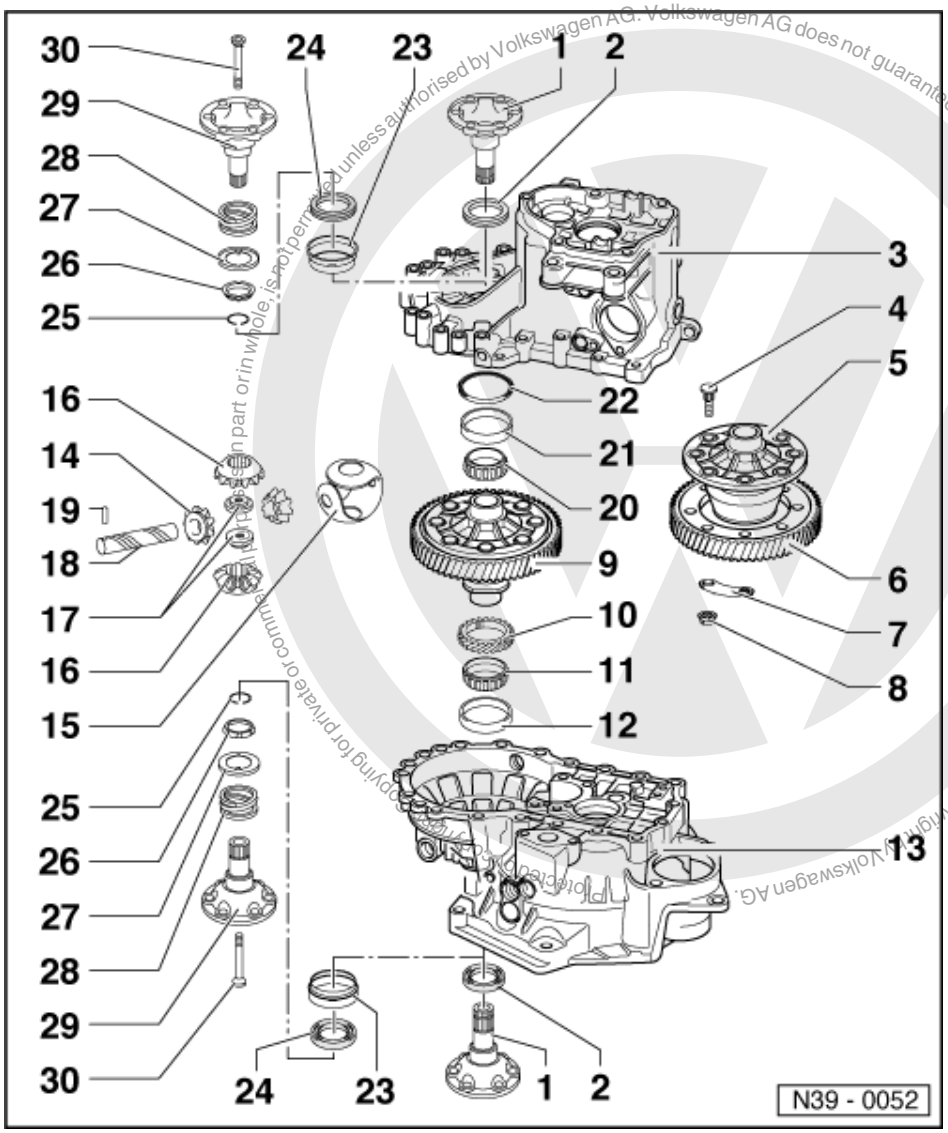
12 Taper roller bearing outer race
- Knocking out => Fig. 1
- Pressing in => Fig. 2

13 Clutch housing

14 Planet pinion
- Installing in gearboxes without springs behind flange shafts => Fig. 14
- Installing in gearboxes with spring behind flange shaft => Fig. 15

15 One-piece thrust washer
- Coat with gearbox oil when installing

satelettronica



16 Sun wheel

- Distinguishing sun wheels => Fig. 13
- Installing in gearboxes without springs behind flange shafts => Fig. 14
- Installing in gearboxes with springs behind flange shafts => Fig. 15

17 Threaded piece

- Installed in conjunction with springs behind flange shafts => Fig. 15

18 Planet pinion axis shaft

- Knock out with drift
- Installing in gearboxes without springs behind flange shafts => Fig. 14
- Installing in gearboxes with springs behind flange shafts => Fig. 15

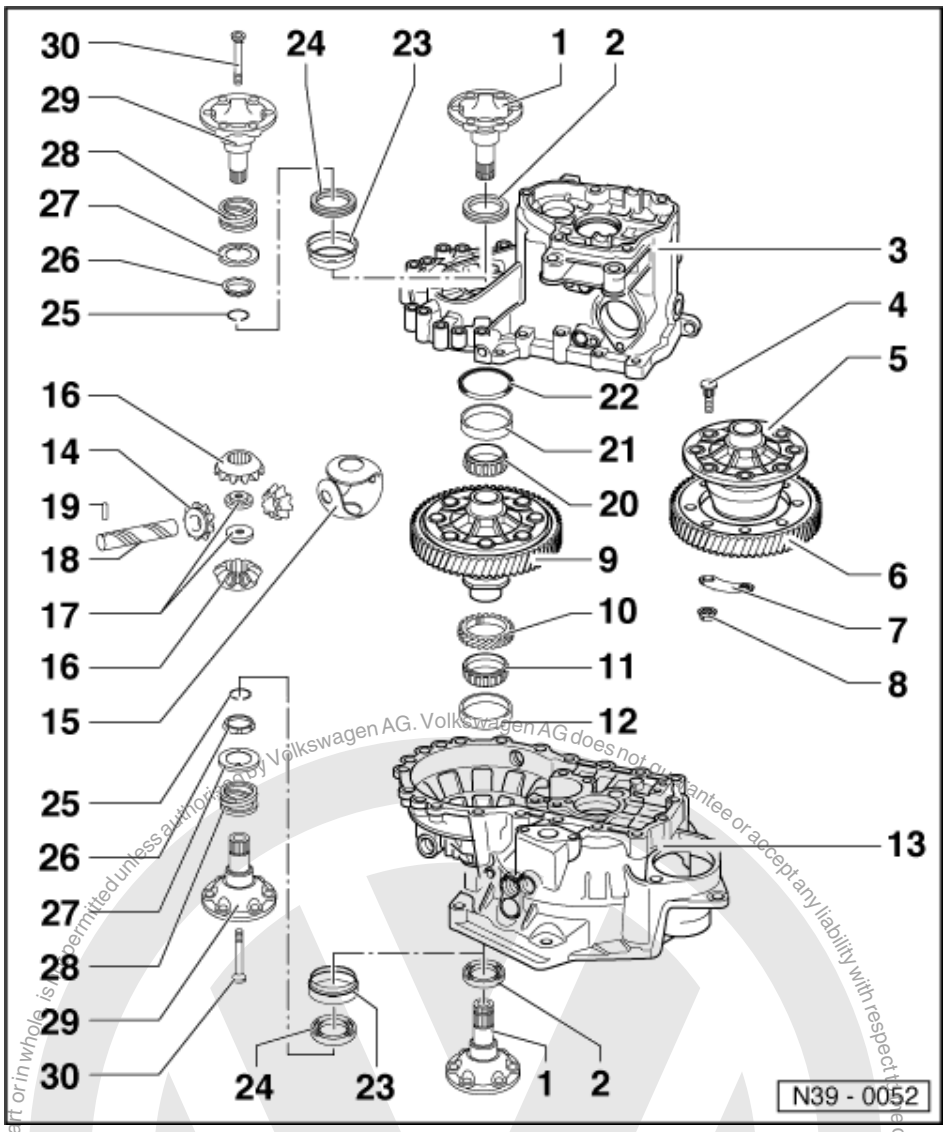
19 Spring pin

- For securing planet pinion axis shaft
- Removing and installing => Fig. 12

20 Taper roller bearing inner race

- Pulling off => Fig. 3
- Pressing on => Fig. 4

satelettronica



21 Taper roller bearing outer race
- Pulling out => Fig. 5
- Pressing in => Fig. 6

22 Shim
- For differential
- Determining thickness => Page 173

23 Sleeve
- Installed in conjunction with springs behind flange shafts
- To accept oil seal (item 24)
- Removing and installing
  => Page 95

24 Oil seal
- In conjunction with springs behind flange shafts
- Renewing => Page 154

25 Circlip

- Installed in conjunction with springs behind flange shafts
- Ensures taper ring, thrust washer and spring are held in position when flange shaft is removed

26 Tapered ring

- Installed in conjunction with springs behind flange shafts
- With grooves to secure thrust washer
- Installation position: Taper towards differential housing

27 Thrust washer

- Installed in conjunction with springs behind flange shafts
- Installation position:
  Shoulder towards spring, tongue to tapered ring

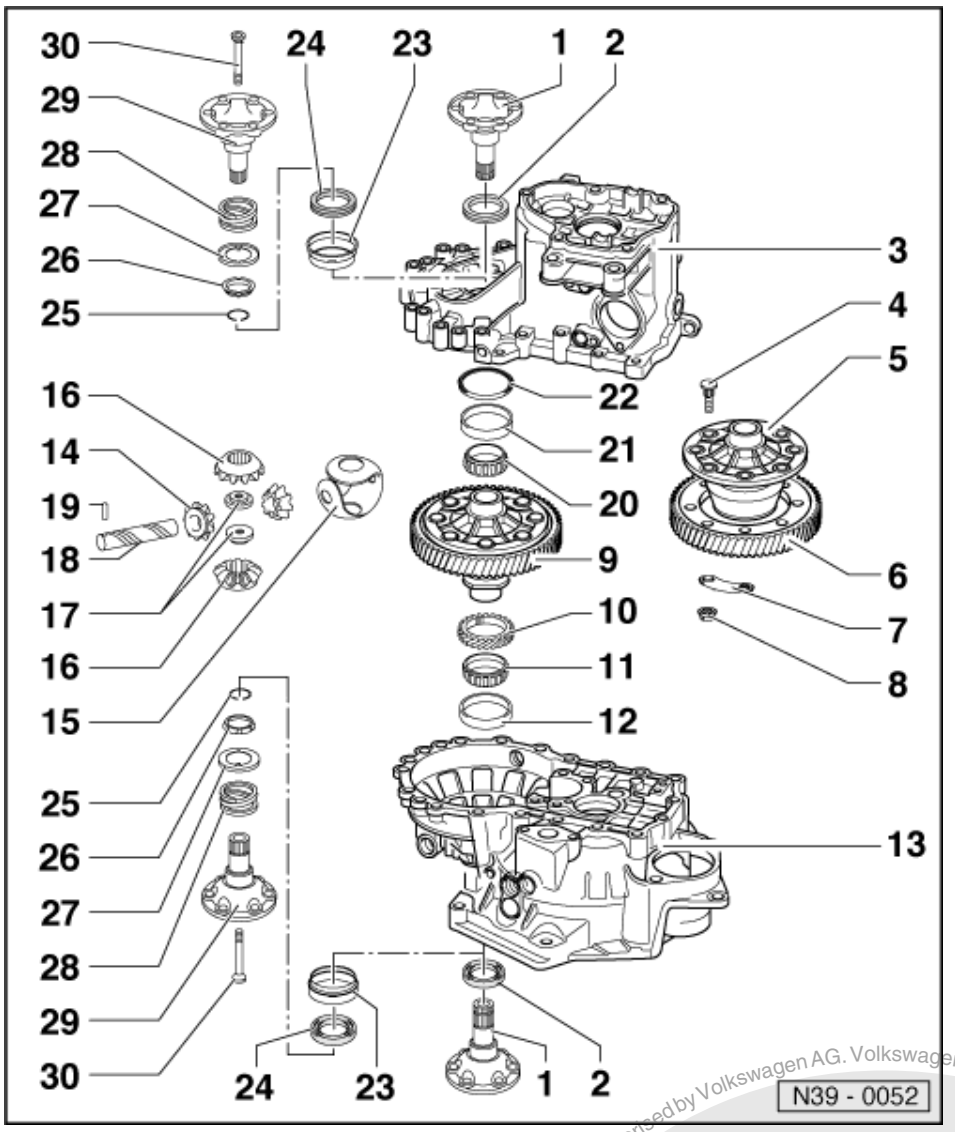
satelettronica



28 Spring for flange shaft

- Installed behind flange shafts
- Allocation to gearbox with springs behind flange shafts => Page 2

29 Flange shaft

- With drilling for cone head bolt
- Installed in gearboxes with springs behind flange shafts
- Removing and installing
  => Page 154

30 Cone head bolt, 25 Nm

- Installed in conjunction with springs behind flange shafts
- Bolt into threaded piece (item 17)

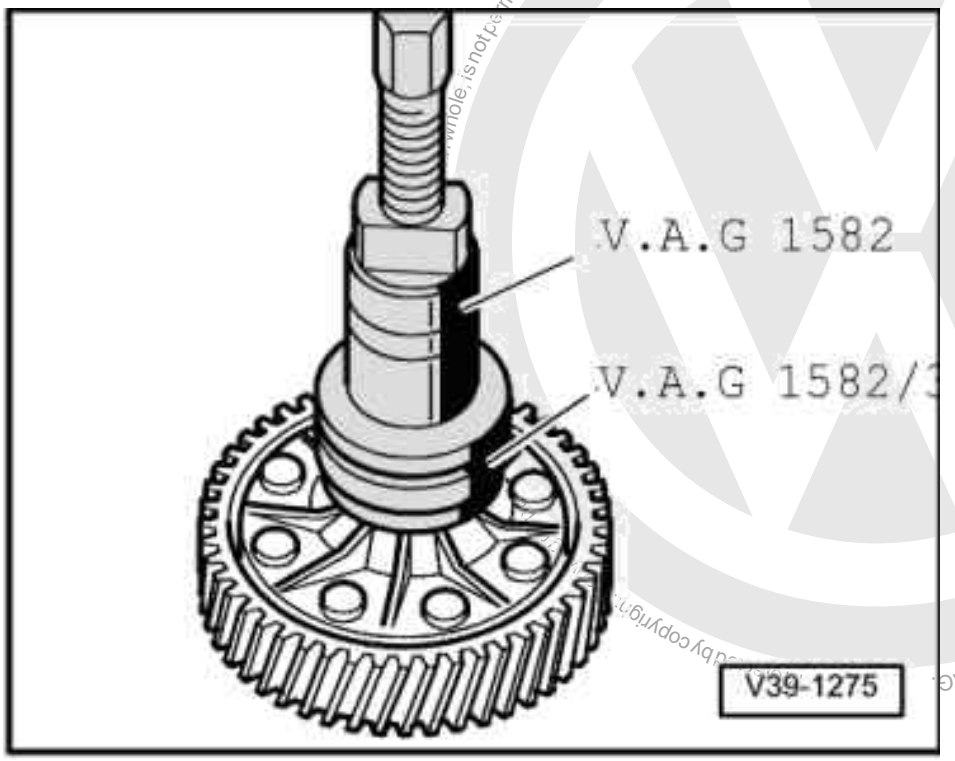
-> Fig.2 Pressing taper roller bearing outer race into clutch housing

No shim is installed in the clutch housing end.

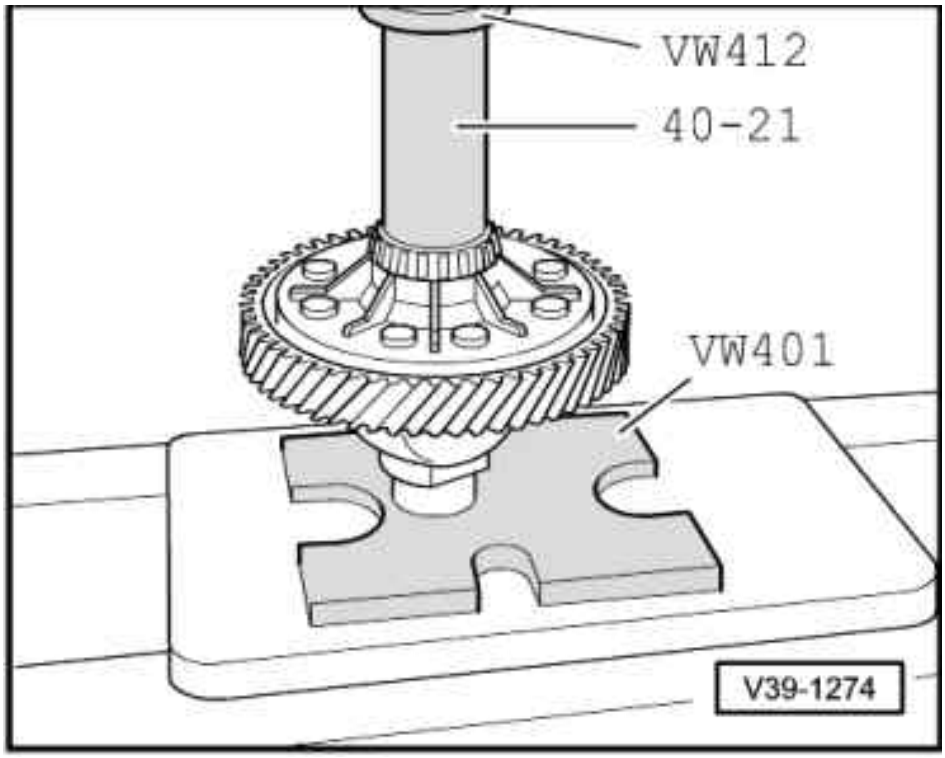


-> Fig.3 Pulling off taper roller bearing inner race

- Before fitting the extractor position press piece 40-105 on differential housing.

Note:

Both both taper roller bearing inner races are pulled off the differential housing in the same way.

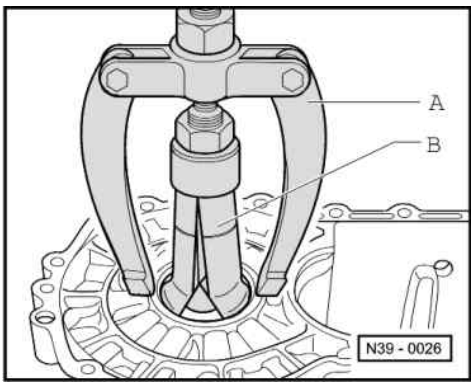


satelettronica

-> Fig.4 Pressing on taper roller bearing inner race

Note:

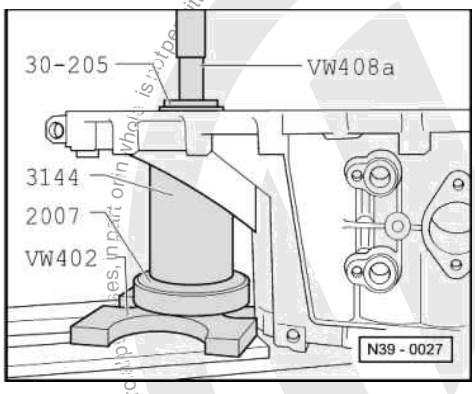
The taper roller bearing inner races for gearbox housing and clutch housing are pressed on with the same press tools.



-> Fig.5 Pulling taper roller bearing outer race out of gearbox housing

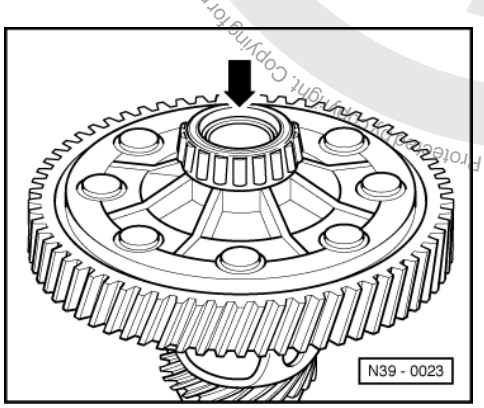
A - Counter support, e.g. Kukko 22/2

B - Internal puller 46...58 mm, e.g. Kukko 21/7



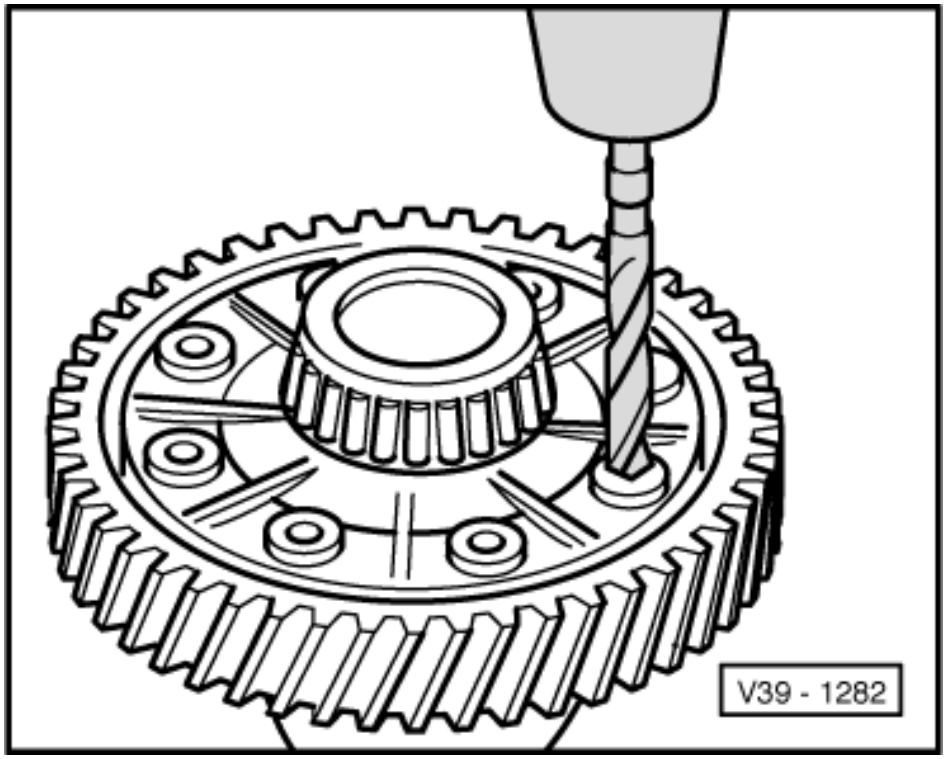
-> Fig.6 Pressing taper roller bearing outer race into gearbox housing

- Fit shim under outer race.
- Support gearbox housing with sleeve 3144 directly below bearing mounting.



satelettronica

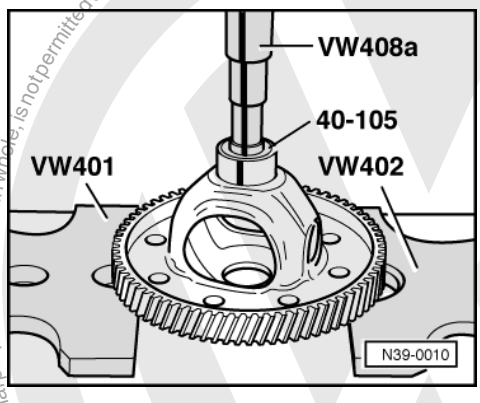
-> Fig.7 Both sides of differential housing are chamfered (arrow) to accept tapered rings/springs



-> Fig.8 Drilling out rivet heads

- Drill out rivet heads with 12 mm drill from countersunk side and knock-out with drift.

Warning!
Clean differential before and after drilling and protect taper roller bearings from swarf.



-> Fig.9 Pressing off final drive gear

- Place thrust piece 40-105 on differential housing.

Note:

Thrust piece 40-105 can be used with all differential housings.

satelettronica

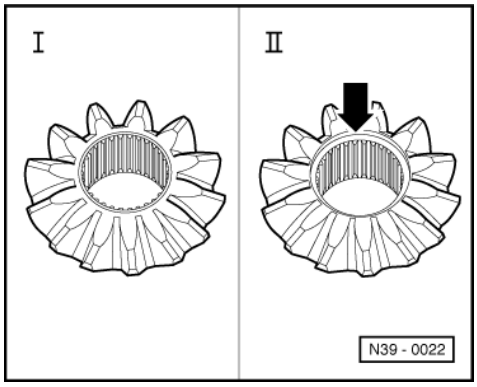
-> Fig.12 Removing and installing planet wheel axis shaft spring pin

Removing

- Cover taper roller bearing inner race and speedometer drive gear to avoid possible damage and ingress of metal particles.
- Knock-out spring pin with chisel, inserting chisel into circumferential groove.

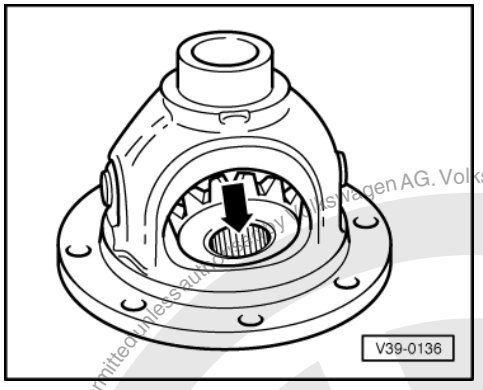
Installing

- Knock fully into the differential housing.



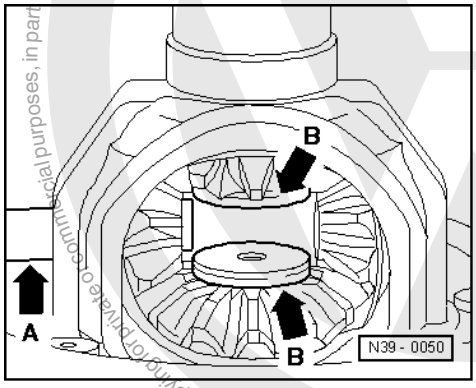
-> Fig.13 Distinguishing sun wheels

Gearbox with springs behind flange shafts	Sun wheel without recess (I)
Gearbox without springs behind flange shafts	Sun wheels with recess (II)



-> Fig.14 Installing sun and planet wheels in gearboxes without springs behind flange shafts

- Lubricate one-piece thrust washer with gearbox oil and install.
- Insert planet pinions, knock-in planet pinion axis shaft
- Drive in new spring pin => Fig. 12
- Insert sun wheels turned through 180°and pivot into position (arrow).



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG
satelettronica

-> Fig.15 Installing sun and planet wheels in gearboxes with springs behind flange shafts

- Lubricate one piece thrust washer with gearbox oil and install.
- Install both sun wheels and secure (e.g. with flange shaft).
- Insert planet wheels turned through 180°and pivot into position.
- Push planet wheel axis shaft (arrow -A-) in until first planet wheel.
- Position threaded piece (arrow -B-) in sun wheels
  Installation position: step towards sun wheel
- Drive planet wheel axle into final position and secure with spring pin.

3 - Adjustment overview

3.1 - Adjustment overview

Note:

If repairs have been carried out to the gearbox it is only necessary to adjust the input shaft, output shaft or differential if components have been renewed which have a direct effect on the adjustment of the gearbox. Refer to the following table to avoid unnecessary adjustment:

		to be adjusted:		
		Input shaft => Page 118	Output shaft => Page 146	Differential => Page 173
Parts renewed:	Gearbox housing	x		x
	Clutch housing	x	x	x
	Input shaft	x		
	Output shaft (final drive)		x	
	Differential housing			x
	Input shaft taper roller bearing	x		
	Output shaft taper roller bearing		x	
	Differential taper roller bearing			x
	4th gear gear wheel	x		

4 - Adjusting differential

4.1 - Adjusting differential

The differential must be adjusted, when

- Gearbox housing
- Clutch housing
- Differential housing

or the

- Differential taper roller bearing

have been renewed.

Adjustment overview => Page 173 .

Special tools, testers and auxiliary items

- Universal dial gauge bracket VW 387
- Measuring plate VW 385/17

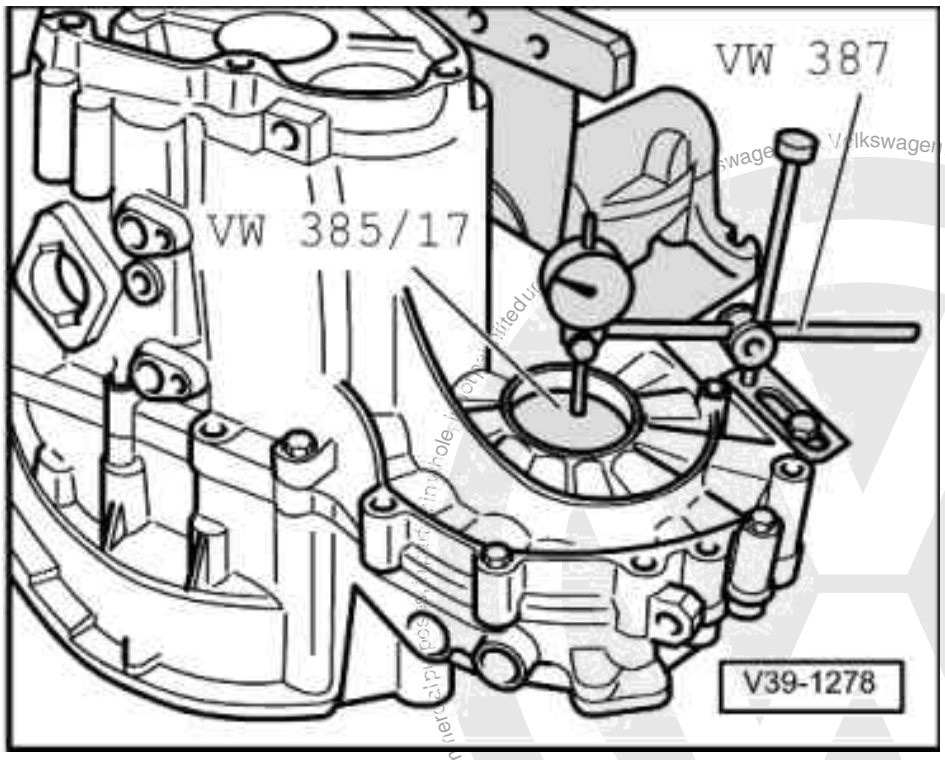
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

- Dial gauge
- Thrust plate 30-205

- Pressing in taper roller bearing outer race without shim into clutch housing using thrust piece 30-205 => Page 168 .

Warning!
Taper roller bearing inner and outer races are a matched pair. Do not interchange.

- Pressing taper roller bearing outer race without shim into the gearbox housing using thrust piece 30-205 => Page 169 .
- Fit differential into clutch housing
- Fit gearbox housing and tighten 5 bolts to 25 Nm.



- -> Mount D.T.I. and "0" with 1 mm preload.
- Move differential up and down and recall play indicated on D.T.I. (Example: 0.70 mm)

Warning!
Do not rotate differential during measurement, as this would cause the bearings to settle and result in a false measurement.

Determining shim thickness

The specified bearing preload is obtained by adding a constant figure (0.40 mm) to the reading obtained.

Example:

Reading	0.70 mm
+ Preload (constant figure)	0.40 mm
Thickness of shim =	1.10 mm

- Remove gearbox housing and pull taper roller bearing outer race out from gearbox housing => Page 169 .

Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorized by Volkswagen AG.
satelettronica

- Insert shims of correct thickness, thickest shim first.

The following shims are available:

Size (mm)	Part No.
0.65	02A 409 210
0.70	02A 409 210 A
0.75	02A 409 210 B
0.80	02A 409 210 C
0.85	02A 409 210 D
0.90	02A 409 210 E
0.95	02A 409 210 F
1.05	02A 409 210 G
1.05	02A 409 210 H
1.10	02A 409 210 J
1.15	02A 409 210 K
1.20	02A 409 210 L
1.25	02A 409 210 M

If the size of shim required is larger than those listed in the table, insert two shims totalling the correct figure.

Varying tolerances make it possible by measuring the shims to obtain the exact shim thickness required.

- Knock-in outer race again and tighten gearbox housing.
